

From Silicon to Cloud: Your End-to-End Partner for Intelligent Hardware.

We design, build, and manufacture the next generation of AI-enabled products.

We Transform Ambitious Ideas into Market-Ready Realities.

Rapidise is your strategic partner for seamlessly connecting design and manufacturing. With over two decades of experience, we provide the deep engineering expertise and owned production facilities to bring complex electronic products to market, faster and with reduced risk.

12+

Years of Design Services Delivery

An Integrated, Full-Stack Approach to Product Development.

We provide every layer you need to transform your vision for an intelligent device into a manufactured reality. Our integrated model eliminates the friction of managing separate vendors, ensuring a seamless path from concept to customer.

The Foundation: Scalable AI Performance at the Core.

Our RISE series of Smart IoT Modules provides a powerful, scalable foundation for your product. From low-power edge devices to high-performance autonomous systems, we have a production-ready module to meet your specific AI processing needs.

Increasing NPU Performance (TOPS)

Expert Hardware Engineering and Image System Optimization.

Beyond the core module, we engineer the complete hardware solution. Our specialized expertise in camera systems ensures optimal performance, from low-level driver integration to advanced ISP tuning for superior image quality.

Camera System Integration

- Sensor driver development & integration (e.g., Sony IMX335)
- CSI2-MIPI & Parallel interface expertise
- Qualcomm mm-camera framework customization
- V4L2 based camera framework development

Image Quality & Algorithm Tuning

- 3A Tuning (Auto Exposure, Auto White Balance, Auto Focus)
- ISP pipeline customization and optimization
- HDR algorithms for still images and videos
- Low light enhancement algorithms

The Intelligence: Accelerate Development with Production-Ready AI Libraries.

Our Telep AI Model Library offers a comprehensive suite of pre-trained and optimized models for a wide range of security, surveillance, and automotive applications. Leverage our IP to drastically reduce your development time and focus on your unique product features.

Accident Detection

Connecting Your Devices with Scalable Cloud & VMS Platforms.

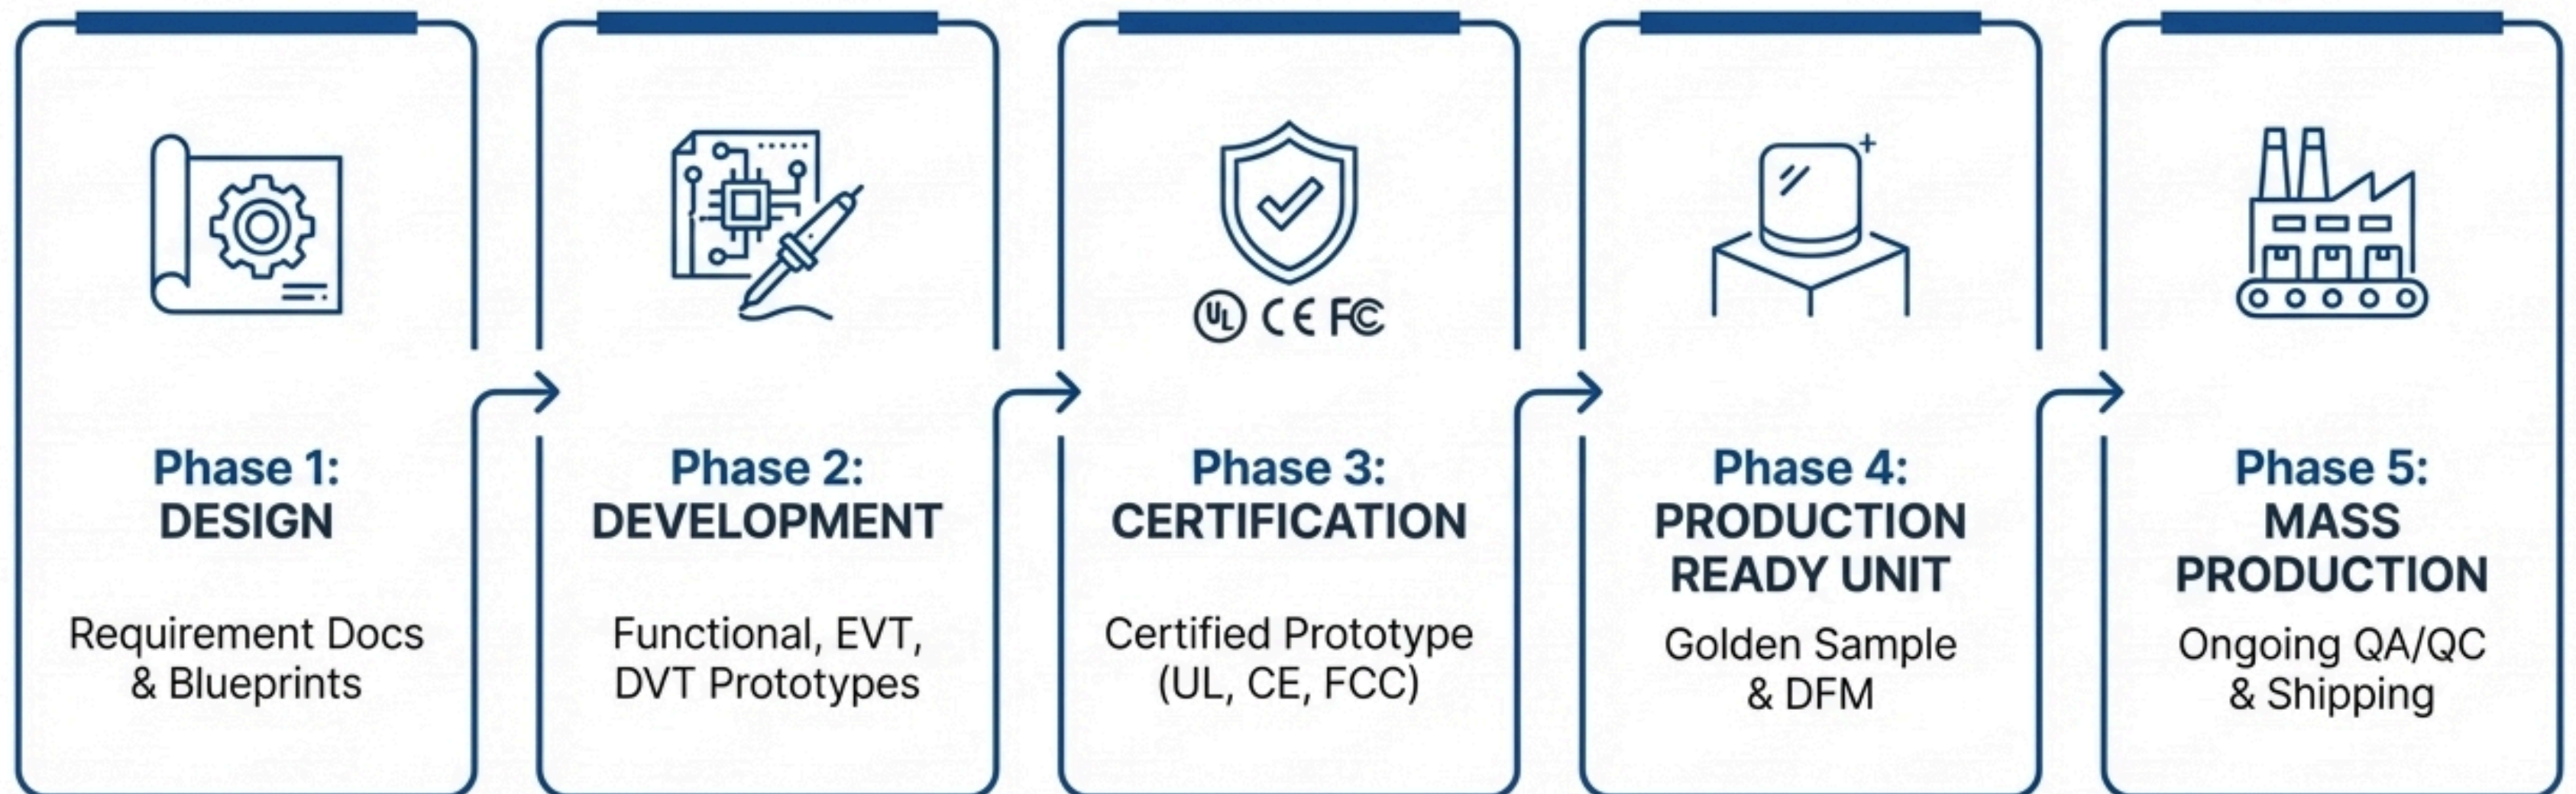

An intelligent device is only as powerful as the platform it connects to. We design and build holistic, end-to-end cloud video management systems (VMS) and IoT platforms with a modern, multi-tenant architecture for efficiency and scale.

-  **Architecture:** Multi-tenant SaaS applications using Docker for tenant isolation and cost reduction.
-  **Live Streaming:** Low-latency video streaming using WebRTC (LiveKit, AWS Kinesis).
-  **Event Analysis:** Serverless pipelines for video frame analysis and alerting (Amazon Rekognition).
-  **Tech Stack:** NodeJS, ReactJS, PostgreSQL, MongoDB, full AWS suite.

The Realization: A Proven Process from Concept to Mass Production

Our hardware development lifecycle is a phased, milestone-driven process designed to ensure quality, manage risk, and provide full transparency from the initial blueprint to the final commercialized product.

In-House Manufacturing and Reliability Testing for Unmatched Quality Control.

We don't just design products; we build them. Our state-of-the-art, owned manufacturing facilities and comprehensive reliability test labs ensure your product is built to the highest quality standards and ready for the rigors of the real world.

Manufacturing

- PCB Assembly (SMD, DIP)
- Box Build
- Class 100,000 Clean Rooms
- In-line X-Ray Inspection

Testing

- EMI/EMC
- IP Rating (Water/Dust)
- Thermal Shock
- Vibration
- Highly Accelerated Stress Test (HAST)

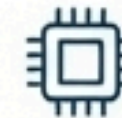

The Proof: Delivering a State-of-the-Art Access Control System.

For a client seeking a perfect balance of contemporary design and high-tech functionality, we delivered a complete, market-ready access control system, managing the entire journey from initial concept to a certified, mass-produced product.

Our End-to-End Role

- Product Requirement Definition
- System Architecture
- Hardware & Firmware Development
- Mechanical ID Design
- Prototyping & Testing (EVT)
- Global Certifications (FCC, UL, AT&T, IP65)
- Mass Production

Key Technologies

- iMX 8M Plus Processor
- 11" Touchscreen Display
- LoRaWan Gateway & Cellular
- Wiegand Interface
- IP65 Outdoor Rating

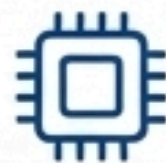

The Proof: Building a Scalable, Multi-Tenant Cloud VMS Platform

To replace a client's third-party portal, we developed a custom, comprehensive cloud video management software platform. The system provides a user-friendly interface to manage and distribute video content securely at scale.

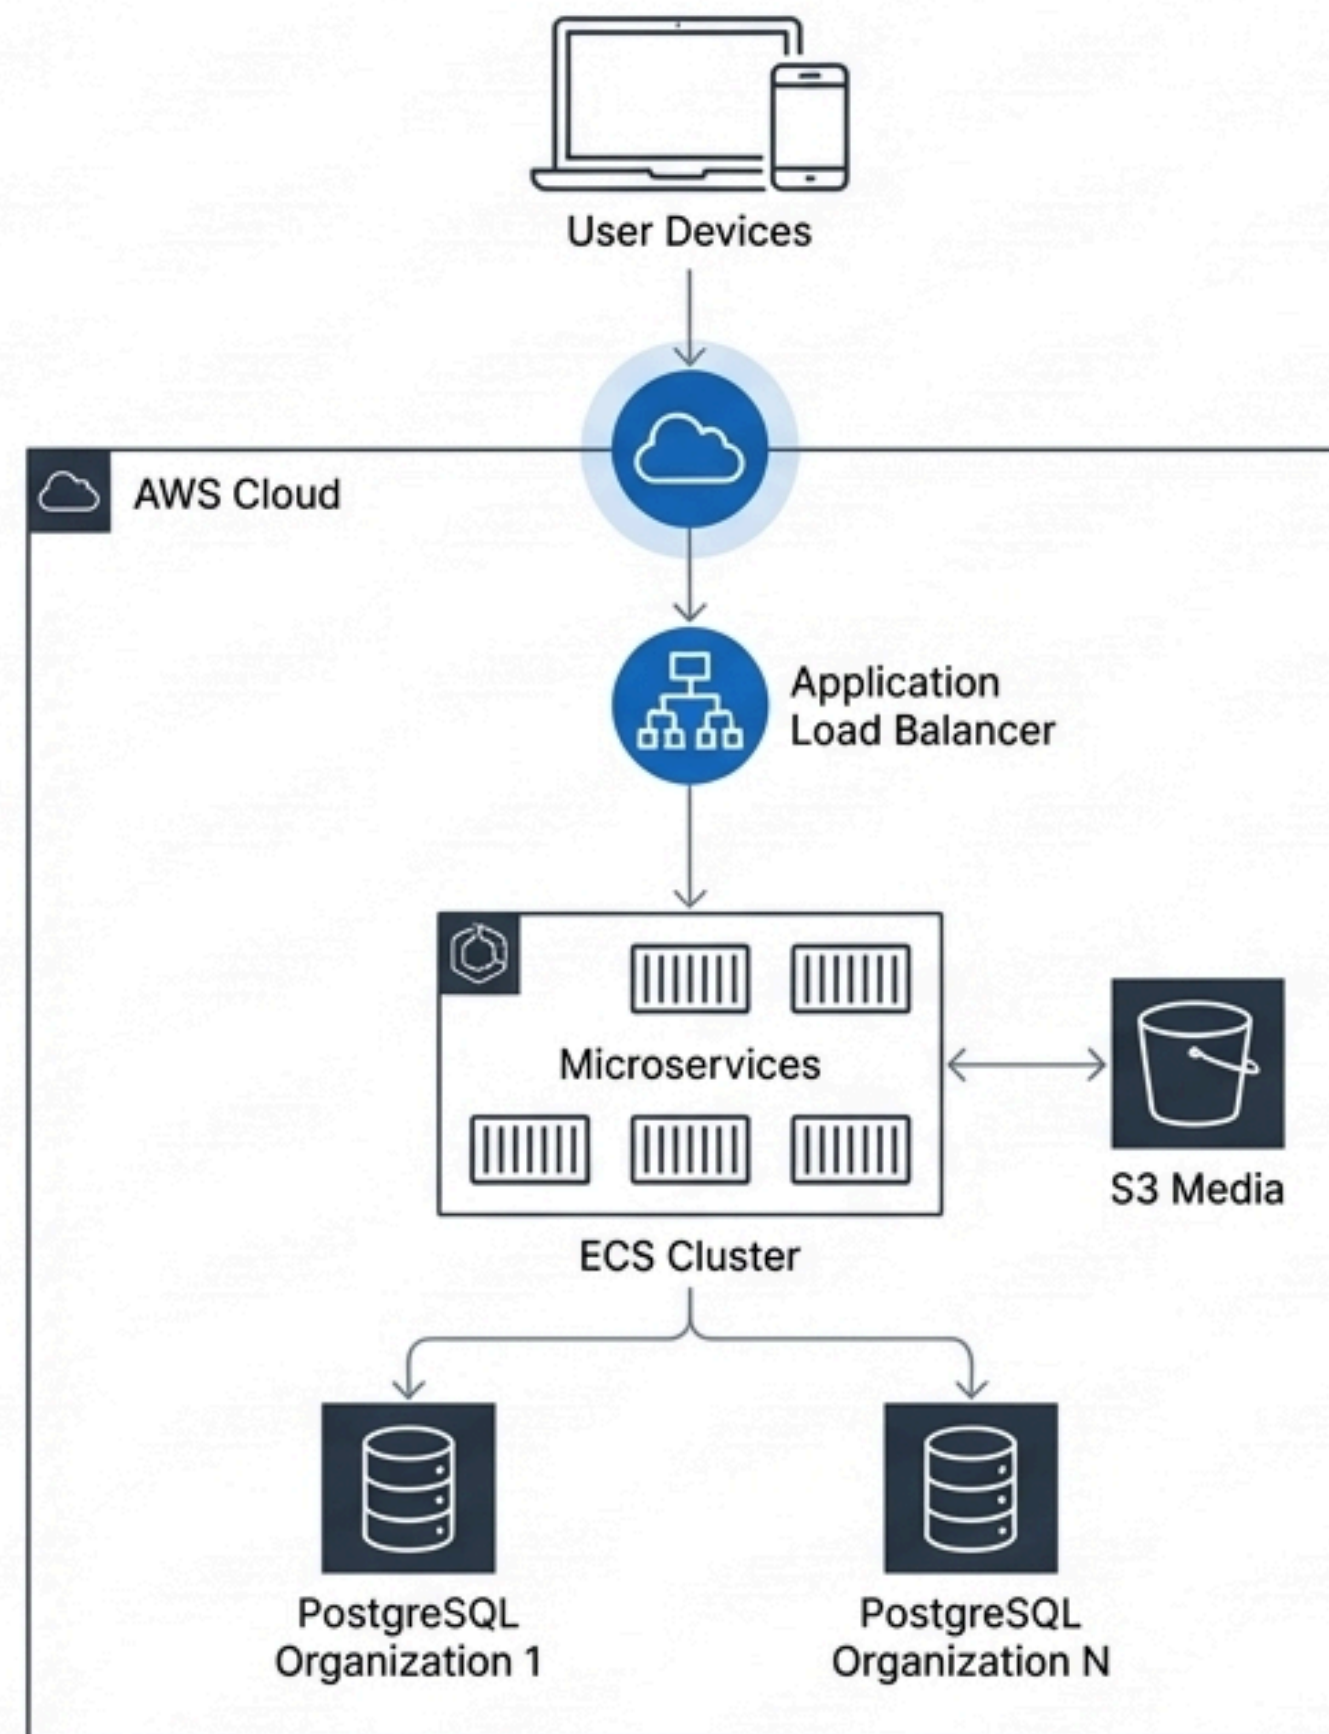

Our Software Development Role

- System Architecture & UI Design
- Frontend Development
- Backend Development
- Multi-Portal (Admin/Partner/Customer)
- Database Design
- DevOps & Deployment
- Testing & QA

Key Technologies

- Frontend: ReactJS
- Backend: NodeJS
- Database: PostgreSQL & MongoDB
- Cloud: Amazon Web Services (AWS)
- Video Encoding: FFmpeg

A Portfolio of Delivered Success Across Diverse Applications.

Our integrated process has been proven across a wide range of intelligent hardware products, each with its own unique design, engineering, and manufacturing challenges.

Smart Mailbox

Developed a connected mailbox for drone deliveries, integrating camera, sensors, and cloud connectivity.

Smart Gateway for Access Control

Engineered a compact access control device with WiFi-6 and BLE-5.4, connecting electrified doors to a cloud platform.

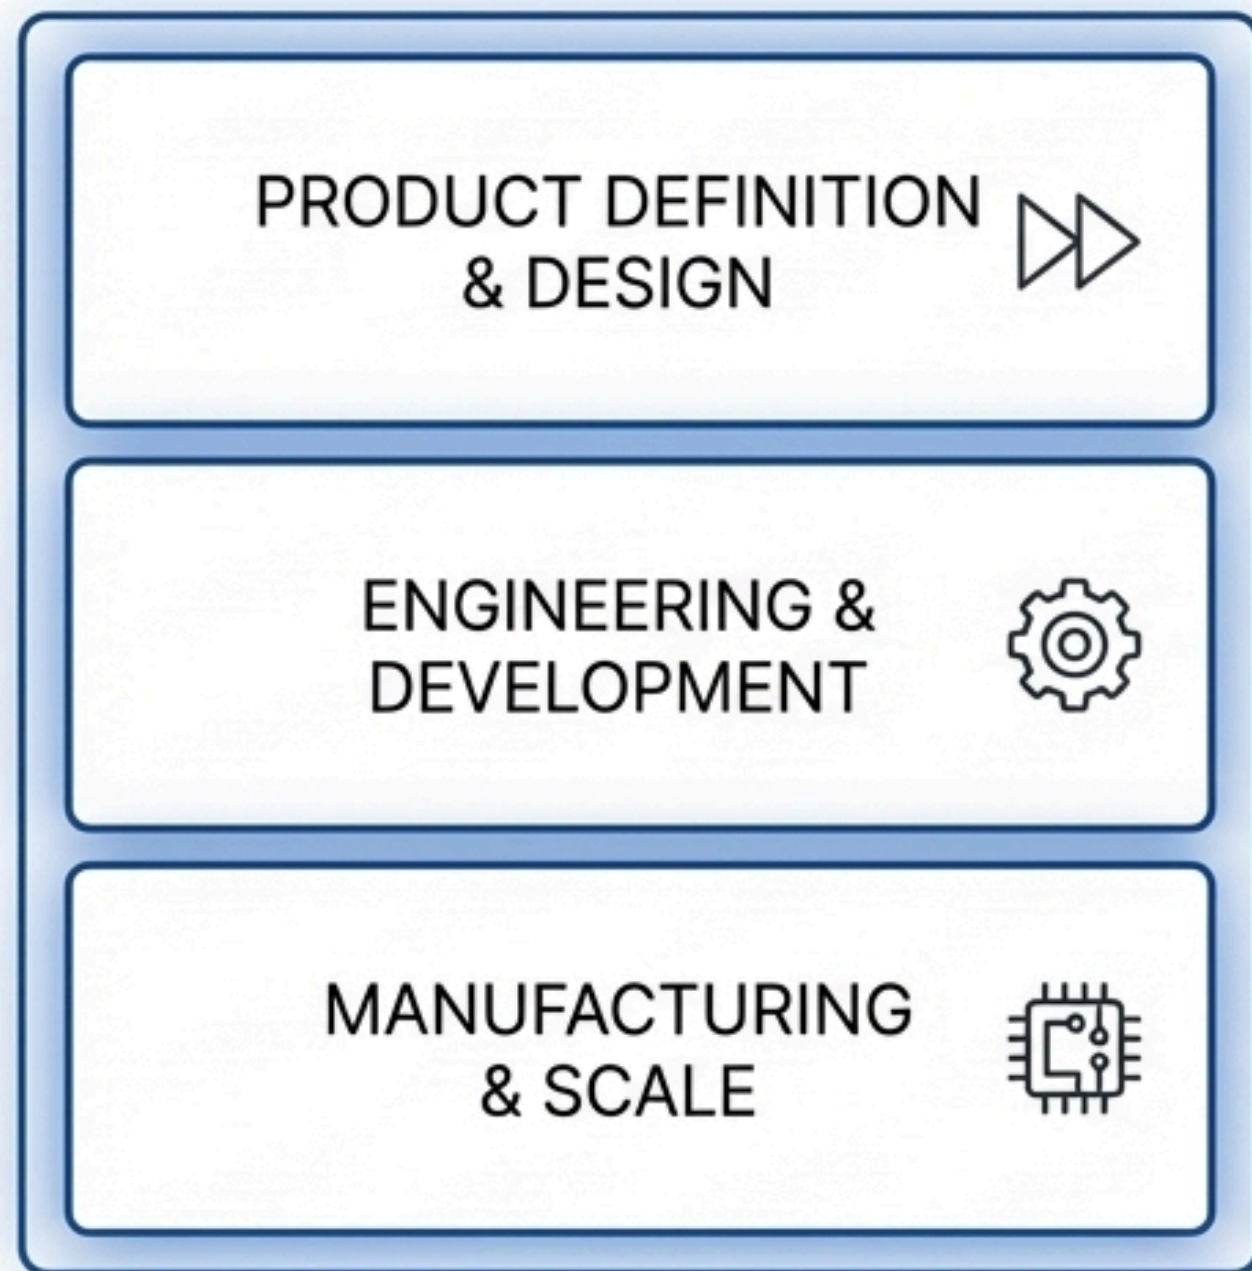

AI-Powered Dash Camera

Built an intelligent dash camera with on-board AI for driver monitoring and accident witnessing.

SmarTouch Smart Switch

Created a premium smart home switch with a 10.1" LCD, mobile apps, and voice assistant integration.

Your Single, Integrated Partner for the Entire Product Journey.

By integrating every stage of the product lifecycle under one roof, we offer a fundamentally better way to build intelligent hardware.

Accelerated Time-to-Market: Leverage our existing IP and seamless process.

Reduced Development Risk: Our proven methodology and in-house expertise de-risk complex projects.

Single Point of Accountability: Eliminate the challenges of managing multiple vendors.

Quality & Scale Assured: With our own manufacturing and testing facilities, we control the entire process.

Let's Build the Future of Intelligent Devices. Together.
