

From Vision to Reality: Your End-to-End Partner in AI Camera Systems.

Quality Delivered. Engineering Accelerated.

The demand for seeing, understanding, and acting on real-world data is exploding.

30% CAGR

Edge AI Market Growth

\$150B by 2028

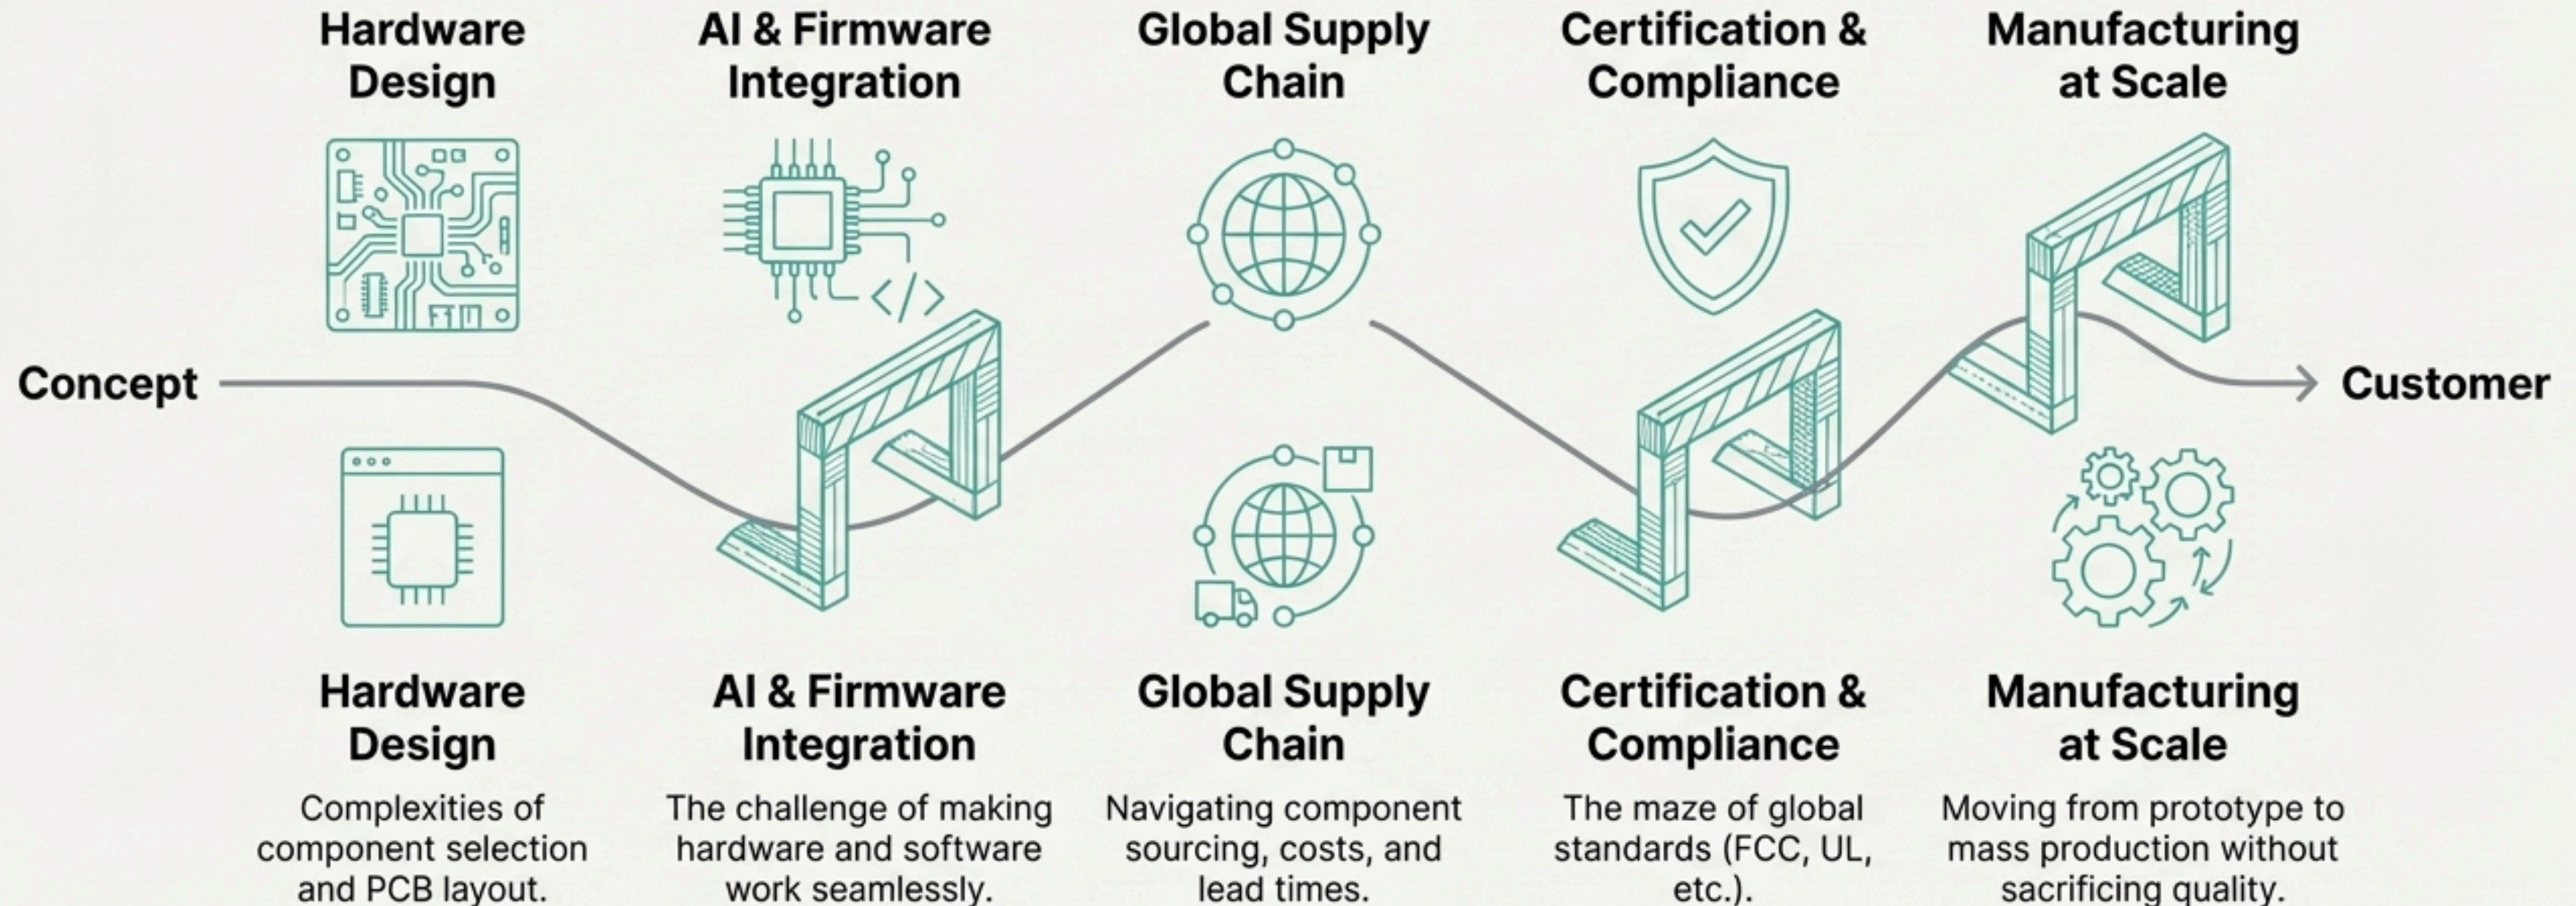

Fleet Telematics &
Dashcam Market

2.5B+ Devices

Connected IoT
Camera Market

Bringing an integrated hardware and software product to market is a marathon of complex, high-stakes stages.

We accelerate your time-to-market with a powerful core technology platform and a portfolio of customizable solutions.

The Engine: The RISE™ Smart IoT Module Platform

The powerful, scalable engine inside our proven product designs.

The Vehicles: Proven Reference Products

Ready-to-customize designs for fleet, consumer, and OEM applications.

The RISE™ Platform: AI Compute for Any Application.

A family of modules engineered for performance, scalability, and efficiency at the edge.

RISE X1

3.5 TOPS NPU

- Entry-level DMS
- Driver Drowsiness
- Blink Detection

RISE X3

8 TOPS NPU

- Smart City Analytics
- Industrial IoT
- Multi-Class Vehicle Detection

RISE X4

12 TOPS NPU

- Multi-camera ADAS
- Pedestrian Detection
- Real-time Incident Detection

RISE Z1

48 TOPS NPU

- High-Performance Edge Computing
- Autonomous Vehicles
- Drones

Performance & Complexity

Proven solutions for the most demanding automotive and industrial applications.

Modular Edge AI Box

A scalable system for commercial fleets, supporting surround view and multiple AI models.

Specs

Supports up to 6 cameras | 3.5 to 12 TOPS AI Compute (RISE X1-X4) | CAN interface

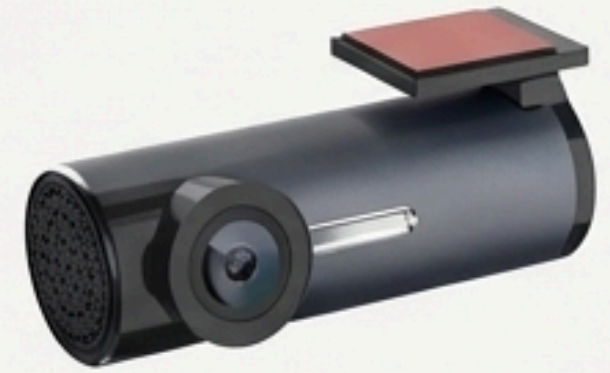

Dual-Camera LTE Dashcam

A connected solution for fleet safety and telematics with in-cabin DMS and cloud integration.

Specs

RISE X1 Platform | 4MP Road & In-Cabin Cameras | LTE (4G) & GPS | 3.5 TOPS

Compact Dashcam with E-Call

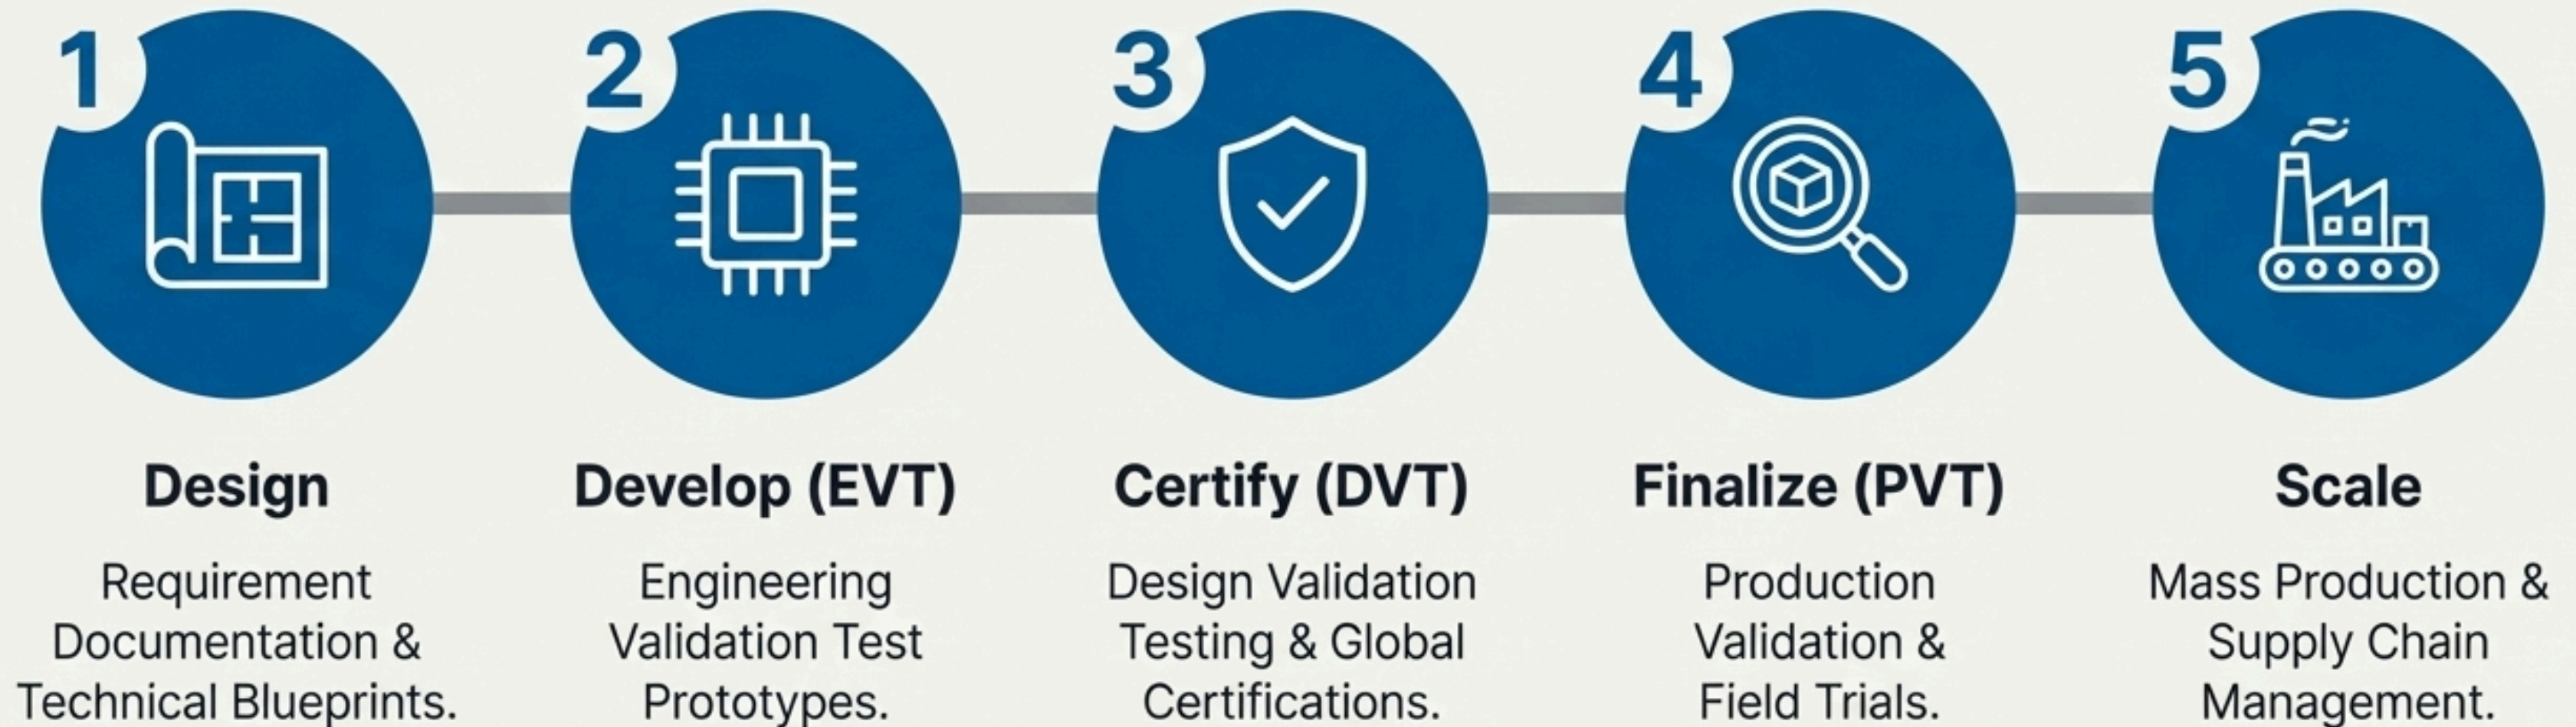

An OEM solution for the Japanese market focused on automated emergency response and safety.

Specs

RISE C1 Platform | 2-unit architecture | Integrated voice call functions | Dedicated SOS button

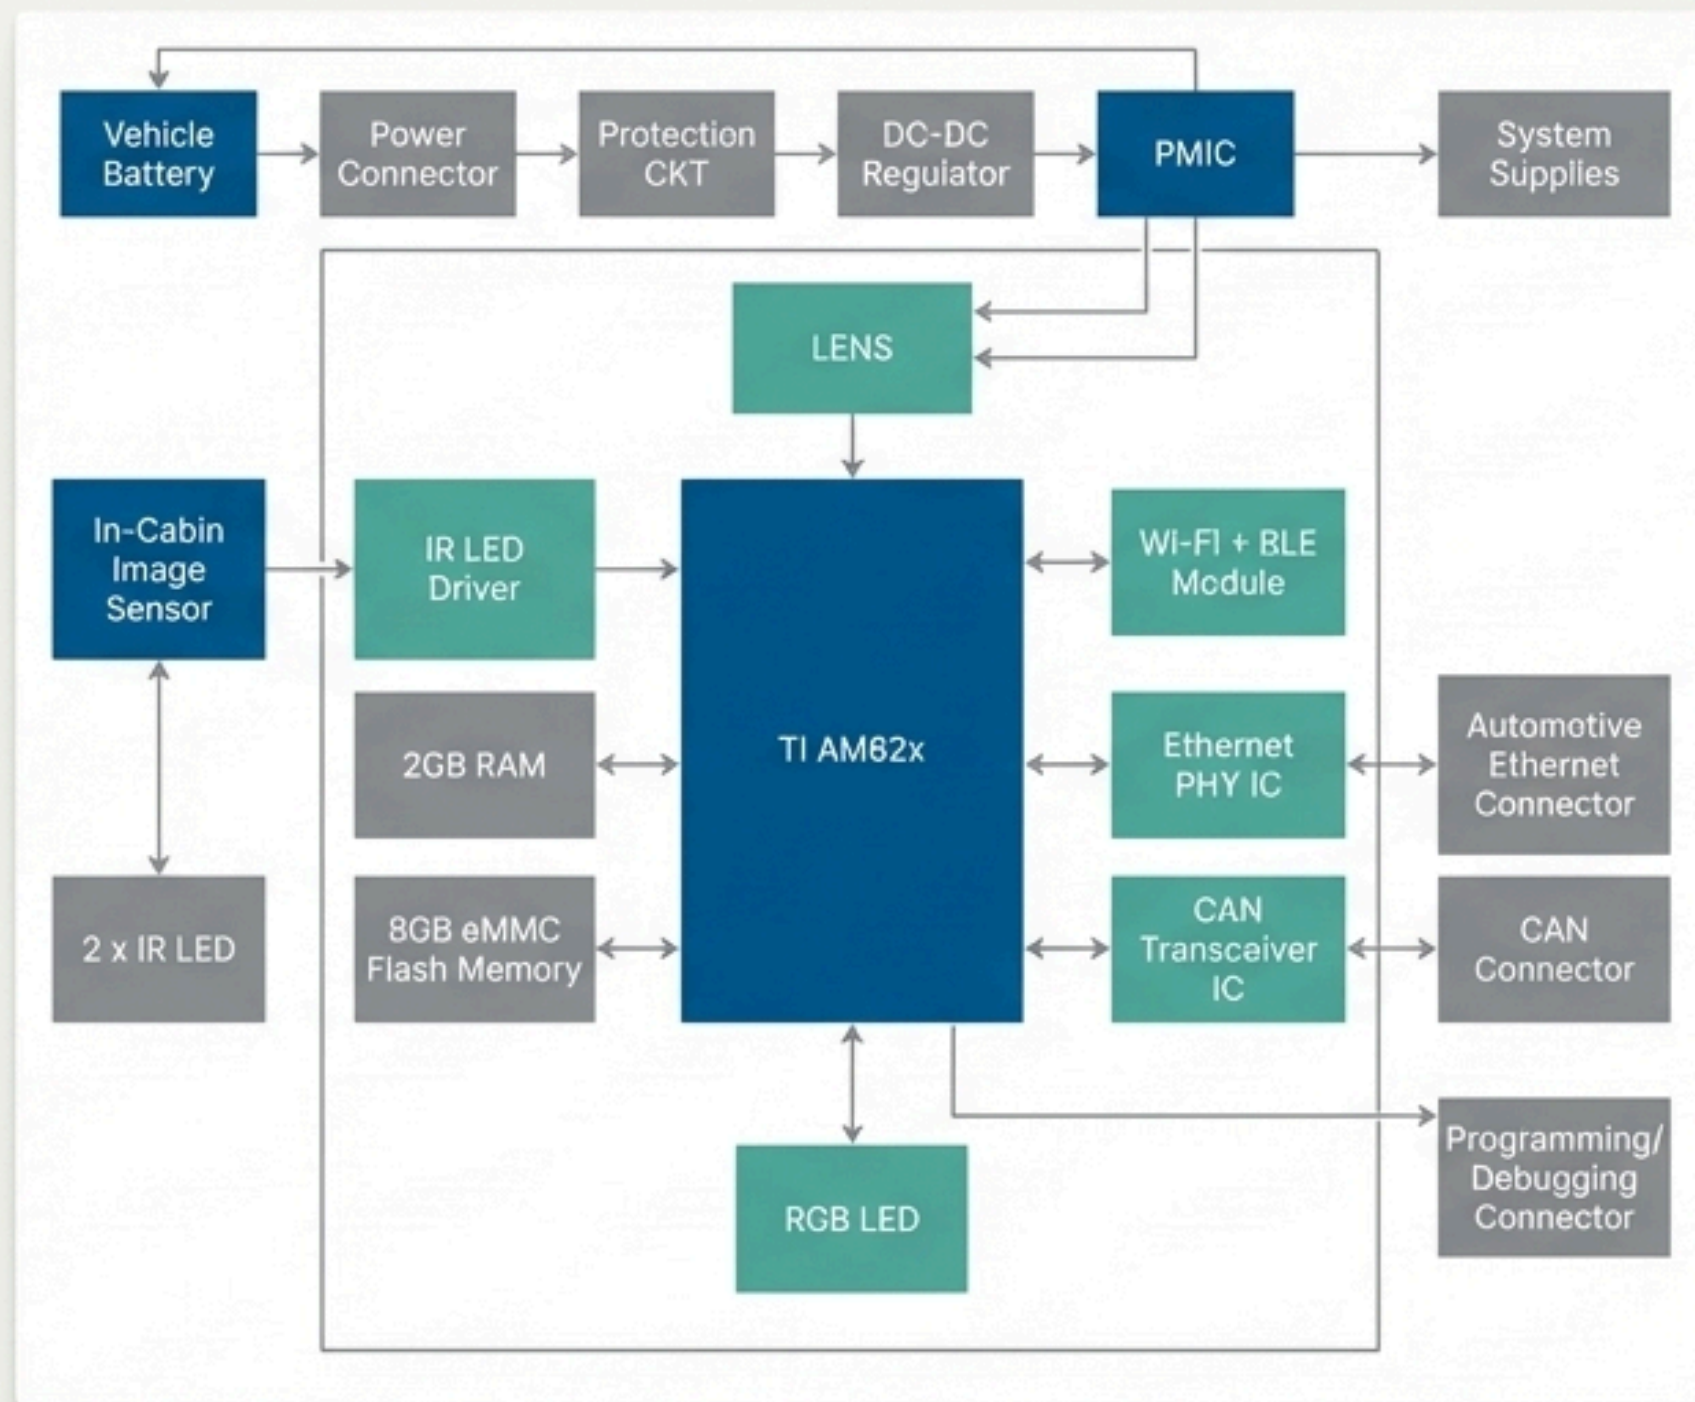

Your Journey: A Proven Path from Blueprint to Production.

We partner with you through a structured, transparent process that ensures quality and predictability at every stage.

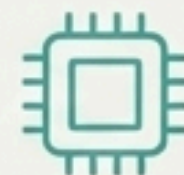

Foundation: Design & Prototyping (Phase 1-2)

Building a robust foundation through collaborative architecture and rapid prototyping.

Product & System Architecture

- Product Requirement Document (PRD) Finalization
- System Block Diagram & Technical Architecture

Component Selection

- Strategic evaluation of processors and sensors for performance and supply chain stability.

TEXAS INSTRUMENTS

Schematic & PCB Layout

- Multilayer PCB design with high-speed signal integrity

EVT Prototypes

- Functional prototypes for board bring-up and engineering validation

Validation: Rigorous Testing & Global Certification (Phase 3)

De-risking your investment with comprehensive in-house testing and guaranteed compliance.

EMI/EMC Testing

Ensuring electromagnetic compatibility for flawless operation.

Environmental Stress Testing

Thermal, Humidity, Vibration, and Water/Dust Ingress (IP Rating) tests.

Product Reliability Labs

In-house capabilities for accelerated life cycle and stress testing.

Global Certifications

Guaranteed compliance for target markets, including FCC, UL, RoHS, and AIS-184.

Scale: World-Class In-House Manufacturing.

Turning your design into a market-ready product with precision, quality, and scale.

500+

Person Manufacturing &
Engineering Team

18

SMT & 22
Assembly Lines

Class 100,000

Clean Rooms for SMT & Camera
Module Assembly

1 Million+

Dashcams Delivered

Our Expertise: Deep, In-house, Full-Stack Engineering Teams.

Embedded Hardware

- Hardware Architecture
- Multilayer PCB Design
- RF Design

Embedded Software

- BSP & Firmware
- Linux Kernel Customization
- FOTA

Mechanical Design

- ID Concept Generation
- Electromechanical Integration
- IP Standards Validation

AI Development

- Computer Vision
- Edge AI Deployment
- Algorithm Development

IT & Cloud

- IoT Dataflow Architecture
- Web & Mobile App Development
- Managed DevOps

New Product Introduction (NPI)

- DFM Analysis
- Supply Chain Management
- Automated Test Jigs

Our Power: A Global Supply Chain Built for Resilience and Scale.

Leveraging global partnerships and significant purchasing power to ensure quality and cost-efficiency.

The Rapidise Advantage: Your Strategic Partner for Intelligent Vision

Technology Acceleration

Get to market faster and with a superior technological foundation using our scalable RISE™ module platform and proven reference designs.

End-to-End Execution

Simplify complexity with a single, accountable partner that manages every stage from collaborative design to in-house mass production.

Certainty at Scale

De-risk your investment with our 25+ years of manufacturing experience, robust quality control, and global supply chain mastery.

Quality Delivered. Engineering Accelerated.

25+ years of manufacturing services delivery.

1 Million+ dashcam units delivered to global markets.

500+ person in-house engineering and manufacturing team.
