Our Proven Path from Concept to Mass Production

A fully-integrated process that de-risks development, ensures quality, and accelerates your time-to-market.

SUPPORTING CAPABILITIES

Embedded Hardware & Software

AI Development & Edge Computing

Mechanical Design & IP Validation

Cloud Engineering & IT

New Product Introduction & DFM

The Core of Intelligence: RISE Smart IoT Modules

RISE X-Series (X1-X4)

RISE X-Series (X1-X4)

The versatile workhorses.

NPU: 3.5 to 12 TOPS

Applications: Smart Retail, Industrial IoT, Automotive (Lane Departure), Agritech.

RISE Y1

RISE Y1

Efficient performance.

NPU: 2 TOPS

Applications: Healthcare (rPPG HR), Smart Shelf, Driver Drowsiness.

RISE Z1

RISE Z1

High-Performance Edge AI.

48 TOPS

Applications: Drones (Real-time Tracking), Autonomous Vehicles, Low-Light Military Vision.

RISE C1

RISE C1

Connected and cost-effective.

NPU: 1.1 TOPS

Applications: Body Cameras, Dash Cams, Home Surveillance.

Accelerate AI Deployment with the Telep AI Model Library

Leverage our production-ready, optimized AI models to add powerful vision capabilities to your product from day one.

Security & Safety Applications

-  Intrusion & Loitering Detection
-  Safety Gear (PPE) Compliance
-  Fire & Smoke Detection
-  Gun & Violence Detection
-  Facial Recognition & Tailgating Warning

Road & Traffic Monitoring

-  License Plate Recognition (ANPR)
-  Vehicle Classification & Counting
-  Congestion & Accident Detection
-  Red Light & Zebra Crossing Violation
-  No Parking & Pothole Detection

Holistic Imaging Expertise: From Sensor to Pixel-Perfect Output

Camera Driver & System Integration

- Sensor driver development (e.g., Sony IMX335)
- V4L2/OMX framework
- Qualcomm mm-camera pipeline customization

Image Quality Tuning

- 3A Tuning (Auto Exposure, White Balance, Focus)
- Low light & LED flash tuning
- Competitive camera IQ analysis

ISP & Algorithm Optimization

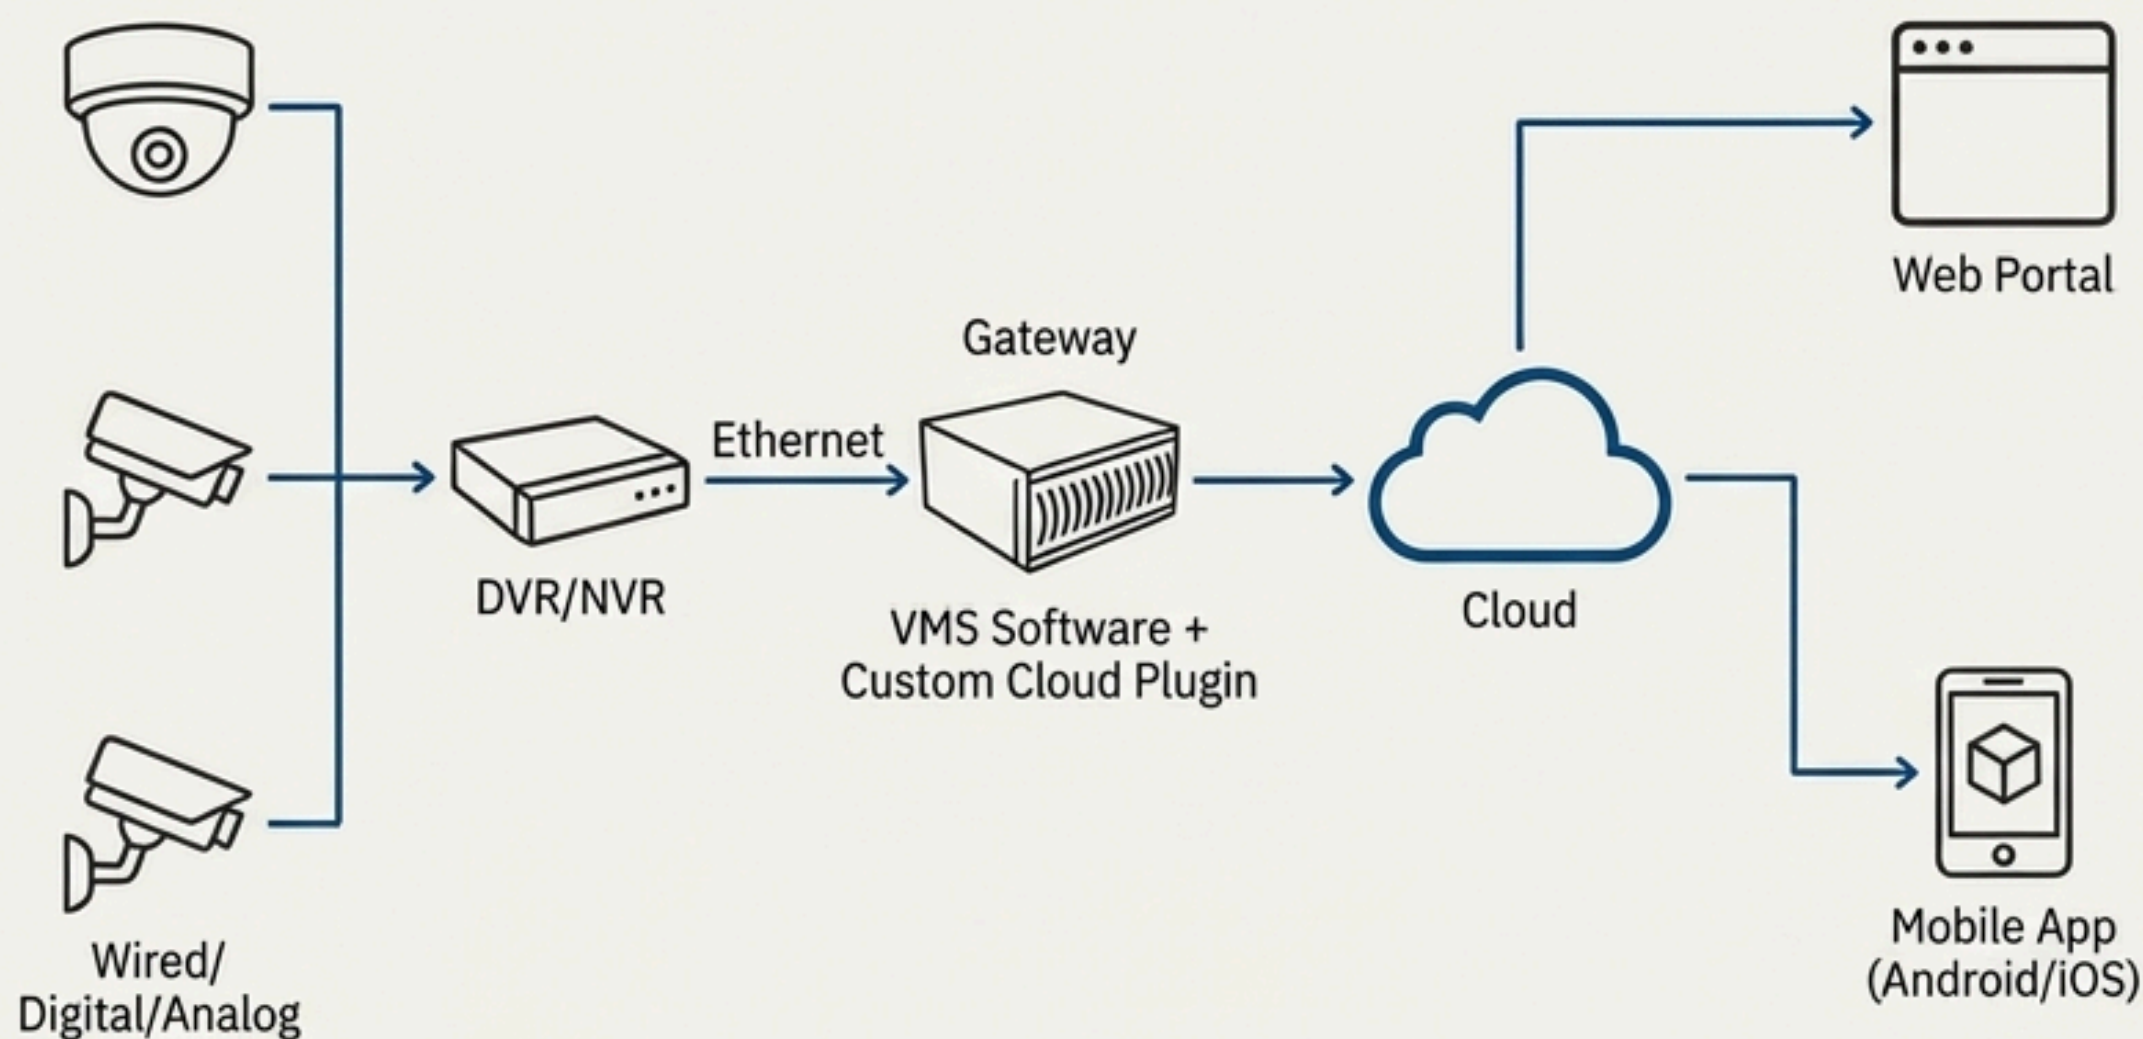

- ISP pipeline tuning
- OpenCL & GPU acceleration
- HDR algorithm optimization for 1080p/30

Advanced Algorithm Enablement

- Depth map generation (ToF & Stereo)
- Electronic image stabilization
- Multi-frame super resolution

Scalable Cloud VMS for a Connected World

Holistic End to End Cloud VMS

Efficient Live Streaming

Mastery of WebRTC to minimize cloud streaming costs.

Intelligent Event Detection

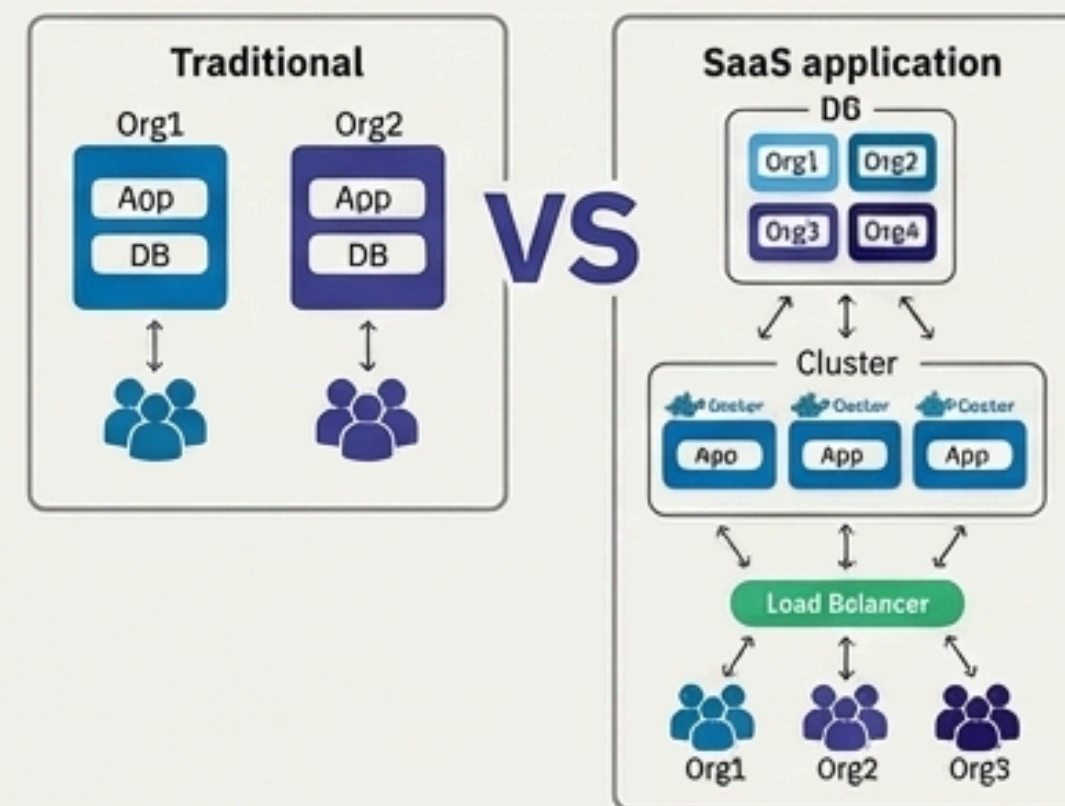

Serverless pipelines using AWS Kinesis & Rekognition for automated analysis and alerting.

Cost-Effective Storage

Smart management of recorded streams, from local gateways to Amazon S3 & Glacier Deep Archive.

Multi-Tenant VMS Approach

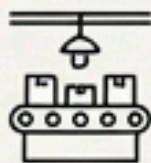

World-Class Manufacturing and Product Reliability

Manufacturing Capabilities

18 SMT &
22 Full Product
Assembly Lines

100,000 Class Clean Rooms for SMT &
Camera Module Assembly

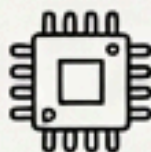

**Advanced
Inspection**

In-line 3D AOI &
X-Ray Machines

Component capability down to

0402mm

In-House Reliability Test Labs

EMI/EMC Testing

Environmental Testing

Mechanical Stress

Vehicle Simulation

Proof in Production: Advanced Security & Access Control

Multi-Tenant Access Control System

A state-of-the-art system featuring the largest color touchscreen in its class, live streaming video, and rugged IP65/IK10 outdoor rating.

Our Role:

Full lifecycle ownership: PRD, System Architecture, Hardware/Firmware, Mechanical ID, Certification, and Mass Production.

Key Tech:

iMX 8M Plus, LoRaWan, Cellular, Wiegand Interface

Remote Surveillance AI Camera

A remote-connected solution with a 3-camera array for wide-angle viewing, powered by the Qualcomm QCS 6490 SoC.

Our Role:

Hardware and system integration, including Telit 4G LTE module.

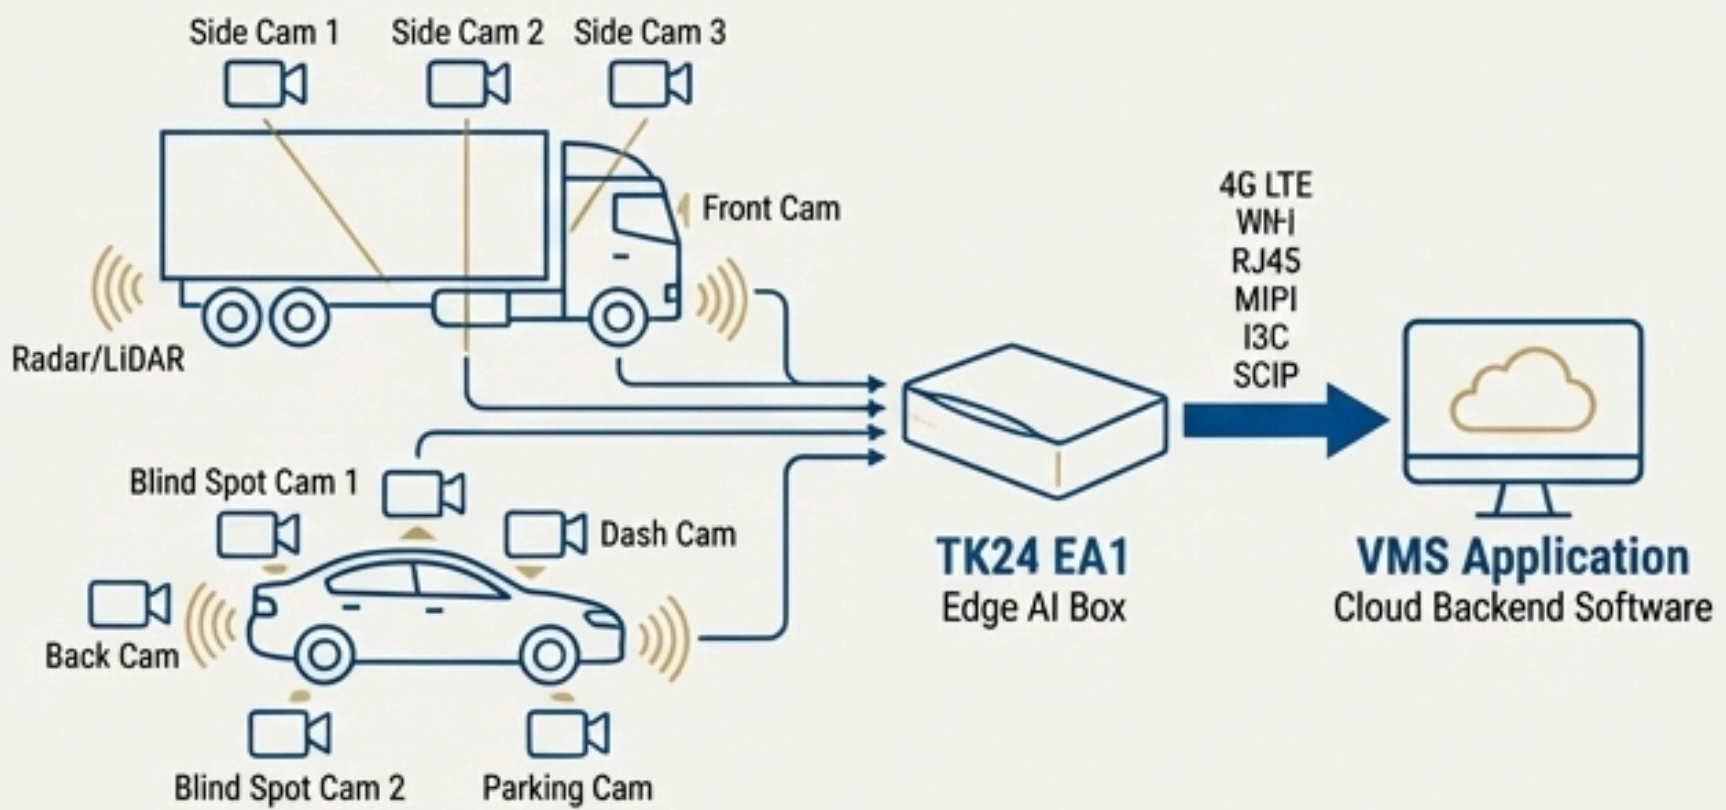

Key Tech:

QCS 6490, Android 9.0, OV13B10 Sensor, MQTT

Proof in Motion: Automotive & Autonomous Systems

Edge AI for In-Vehicle Solutions

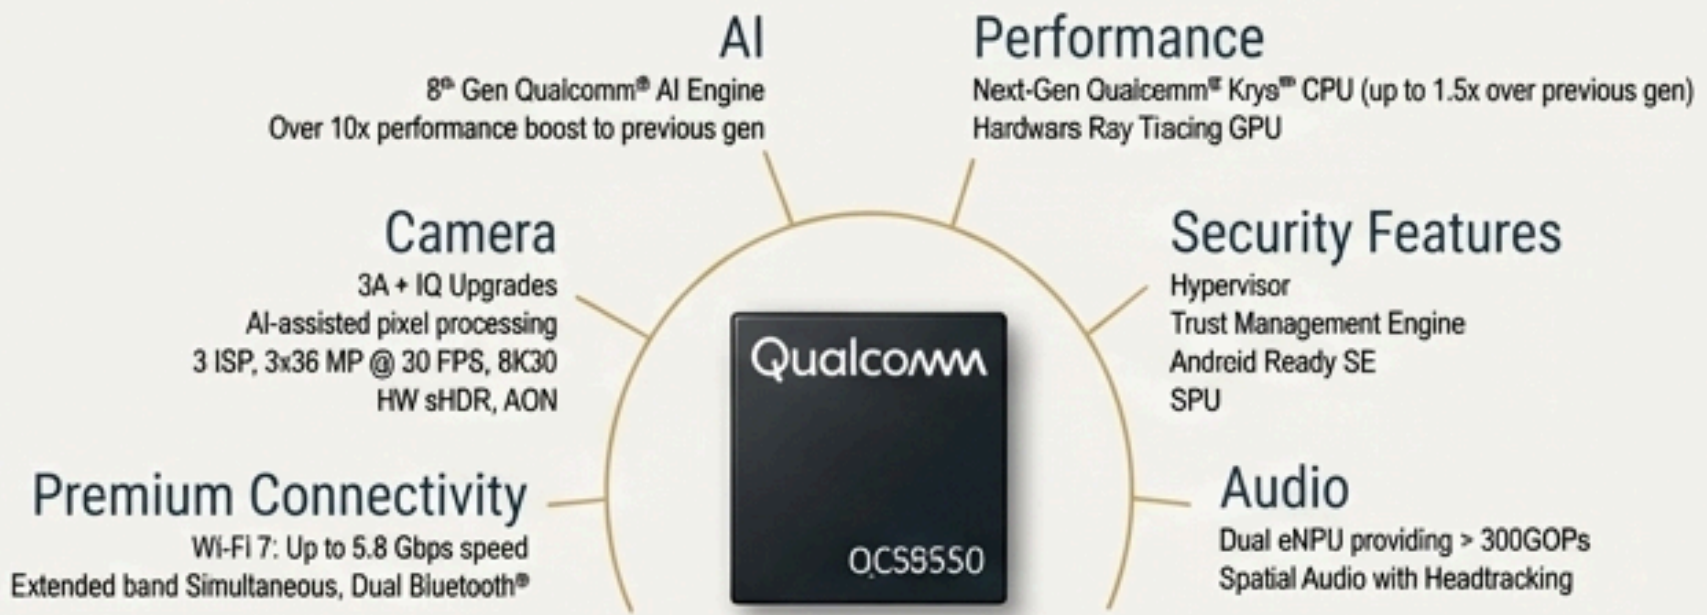

Our Edge AI Box (TK24 EA1) serves as the central compute unit for comprehensive vehicle solutions, processing data from multiple cameras and Radar/LIDAR sensors.

AI Features Enabled:
ADAS/DMS, Collision Detection, Blind Spot Alert, Driver Monitoring.

Low-Light Camera for Mission-Critical Applications

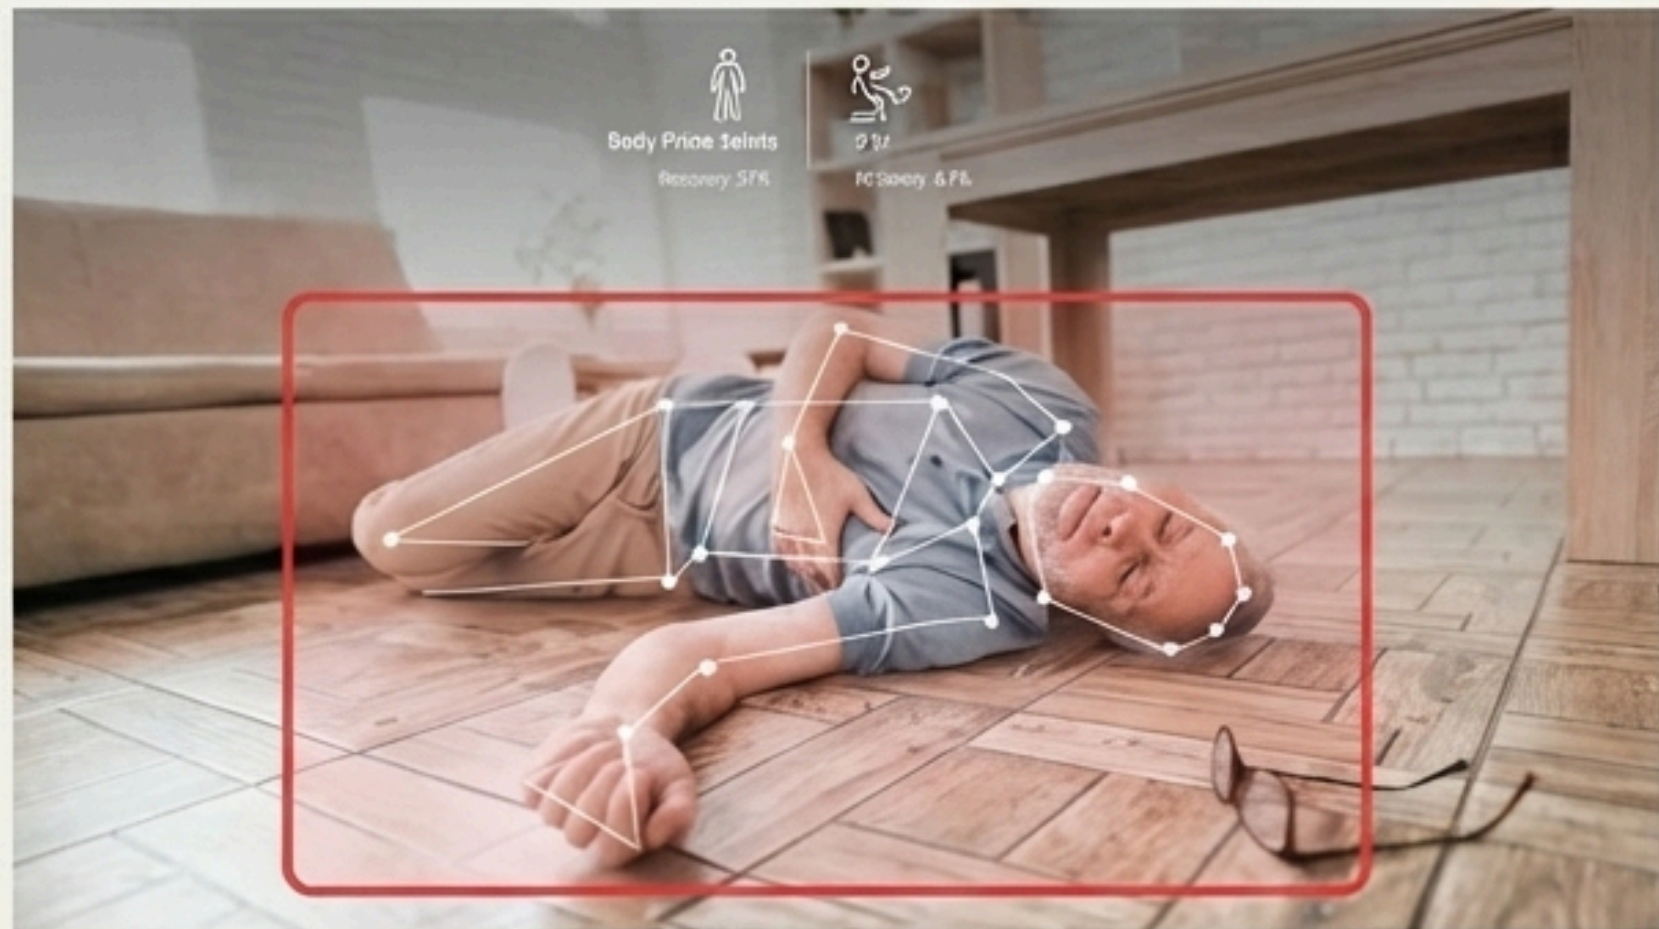

Developing a next-generation, modular low-light camera based on the premium Qualcomm QCS8550 SoC for defense, drones, and underwater photography.

Key Value-Add:
Translating and optimizing imaging pipelines for Qualcomm's advanced Spectra 7 ISP.

Proof of Innovation: Smart Spaces & Human-Centric IoT

Unified Fall Detection & Vital Capture System

A groundbreaking system to enhance safety for elderly individuals, integrating a privacy-preserving radar module with real-time vital capture and smart lock integration for emergency response.

Our Role:

End-to-end development, including carrier board design, AOSP firmware, and AI algorithm development.

Smart Mailbox for Drone Delivery

A secure mailbox receiver for drone deliveries, capable of climate-controlling packages. A complex integration of mechanical, hardware, and cloud systems.

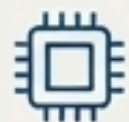

Our Role: Full stack development: Embedded HW/FW, Mechanical, iOS App, Web Interface, and Cloud backend on AWS/Oracle.

The Complete Solution: The Rapidise Edge AI Box Ecosystem

The Platform

A Production-Ready AI Powerhouse

SoC

Qualcomm QCS6490

Camera Interfaces

3x 4-lane MIPI D-PHY, 2x GMSL

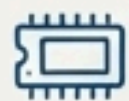

NPU

12 TOPS

Connectivity

Wi-Fi, BLE, 4G/5G (M.2), Ethernet

Memory

8GB RAM / 128GB Flash

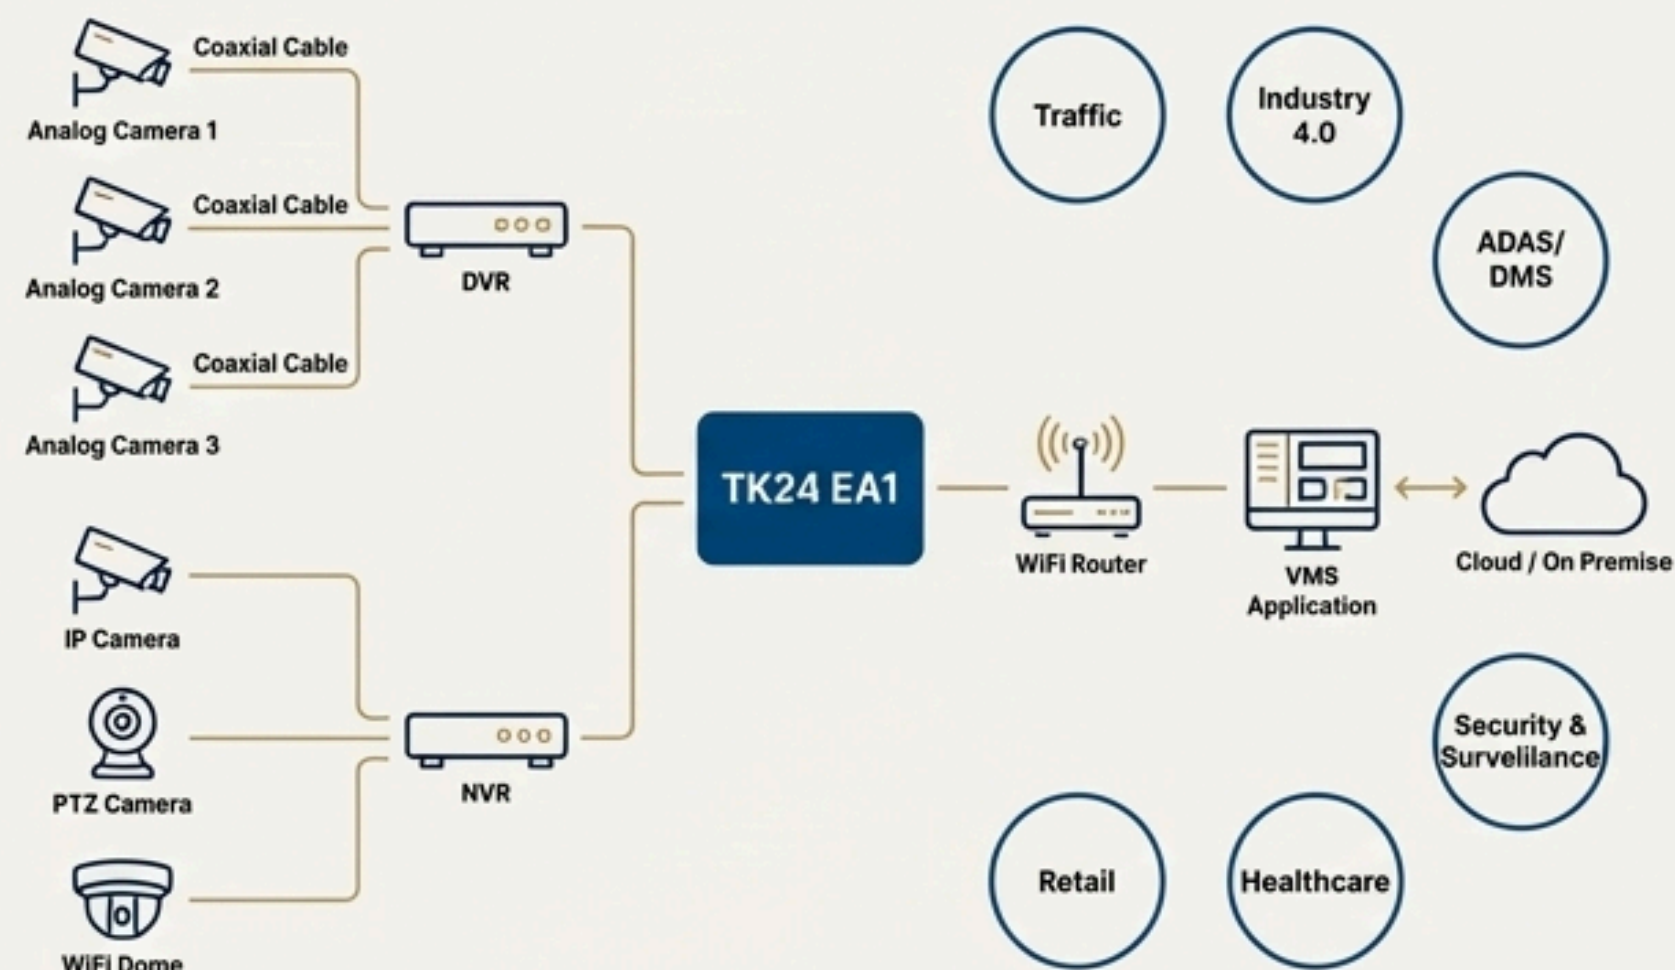

Display

HDMI, DisplayPort (over USB-C)

The Ecosystem

More Than Hardware, A Full Solution

The Rapidise Edge AI Box integrates seamlessly with analog/IP cameras, NVR/DVRs, and our custom VMS Application. Powered by our RISE modules and pre-loaded with Telep AI models, it offers a complete, deployable system for security, traffic, retail, and Industry 4.0.

Your Strategic Partner for Intelligent Product Development

1. Accelerate Your Time-to-Market

Leverage our production-ready RISE hardware modules, Telep AI libraries, and reference designs to launch your product faster than the competition.

2. De-Risk Your Entire Product Lifecycle

Rely on our 25+ years of manufacturing expertise, proven development process, and in-house reliability testing to ensure a robust, scalable product.

3. Scale with Confidence

From a single prototype to millions of units, our integrated design and manufacturing capabilities provide a seamless path to mass production with a single, accountable partner.

**Let's Build the Future of
Vision, Together.**
