

From Concept to Commercialization

Cloud-Based Product Engineering
& Electronics Manufacturing

Bringing Hardware to Life is a Disconnected, High-Stakes Journey.

The traditional ODM model creates gaps in communication, accountability, and efficiency. These disconnects put your product launch, budget, and reputation at risk.

We are transforming the ODM landscape by seamlessly connecting design and manufacturing with our cutting-edge on-demand platform.

We integrate every stage of the product lifecycle into a single, cohesive process, de-risking your journey and accelerating your time to market.

Proven at Scale. Trusted Globally.

135+

Successful Product Deliveries

300+

Manufacturing & Engineering Team

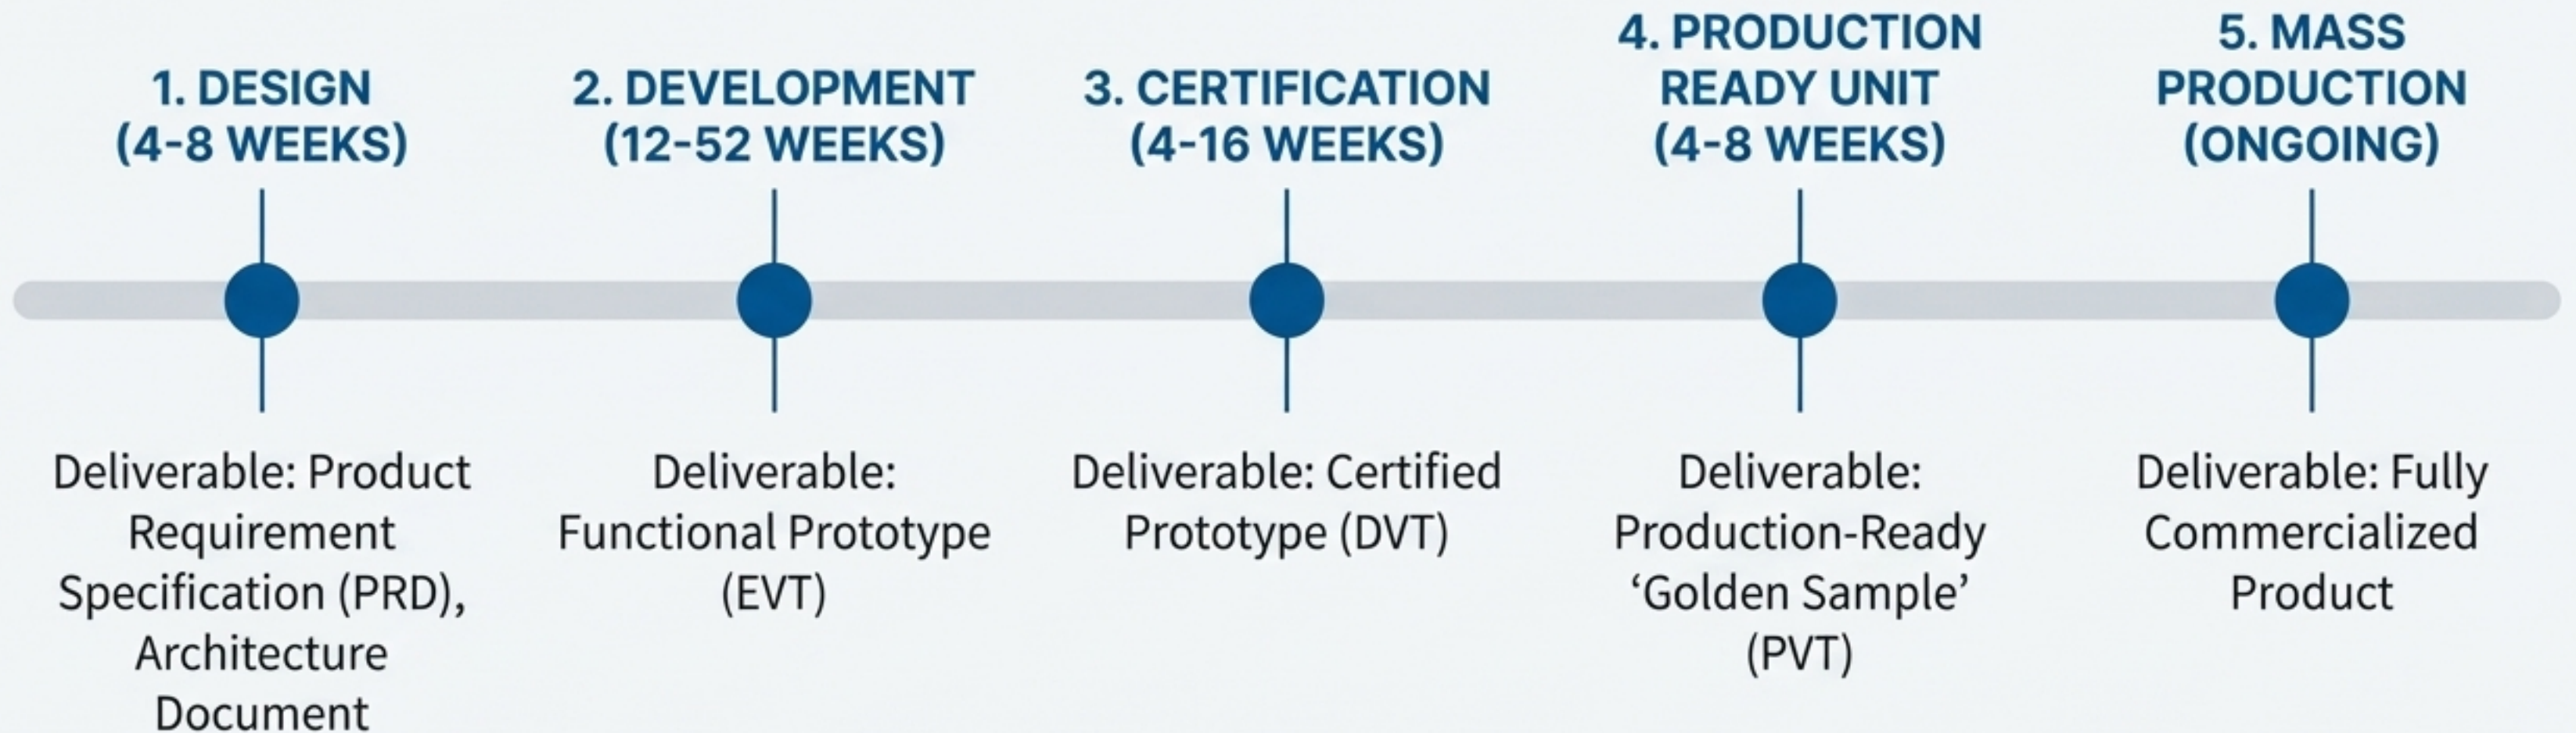

25+

Years of Manufacturing Services Delivery

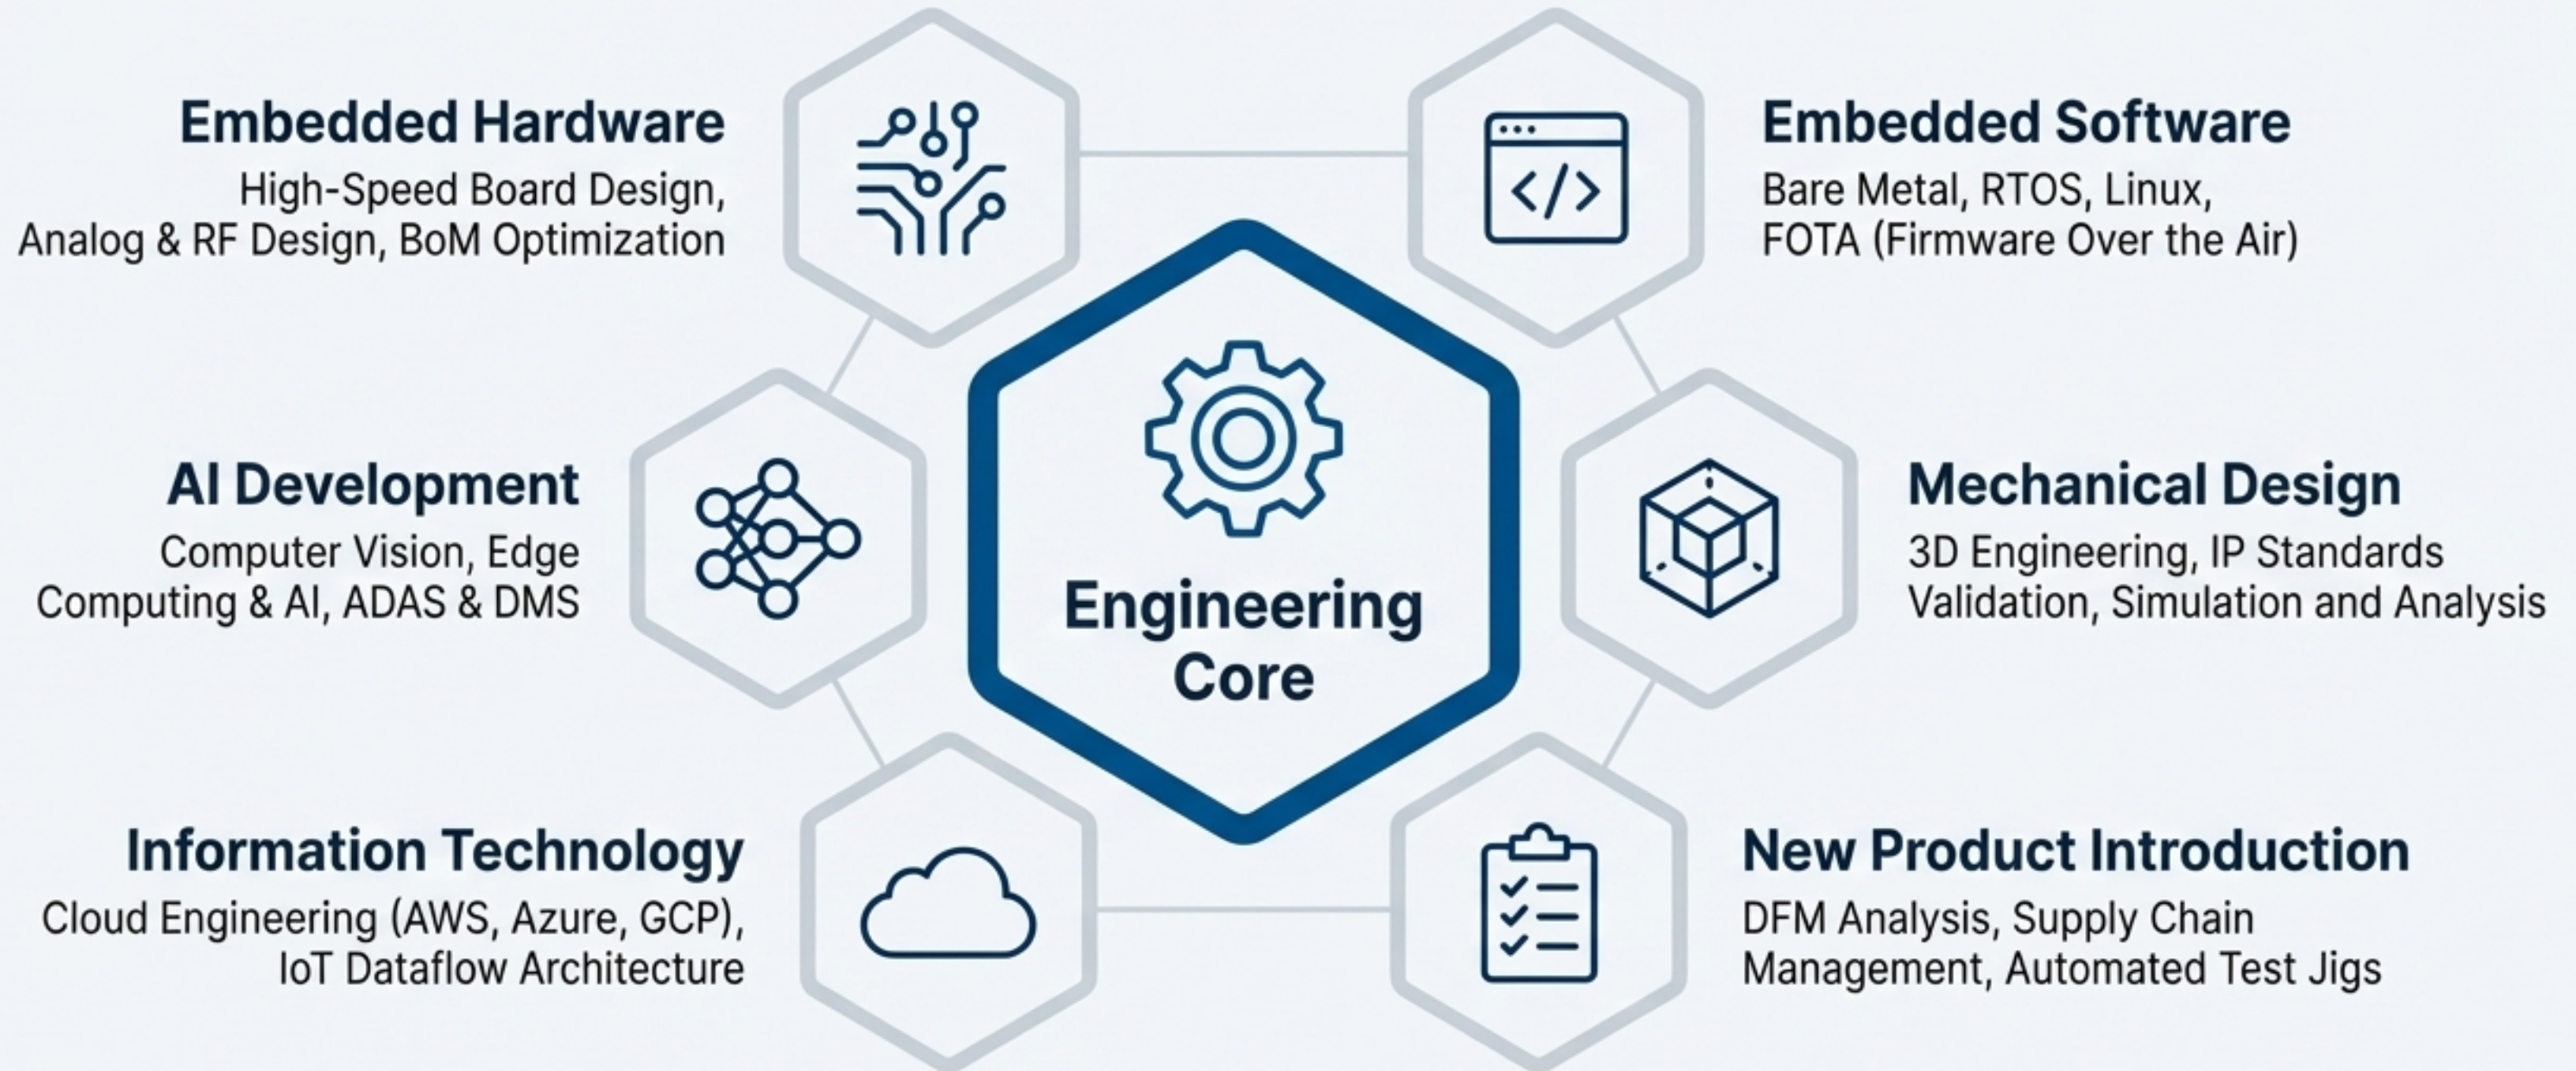

USA | Japan | India

Global Footprint

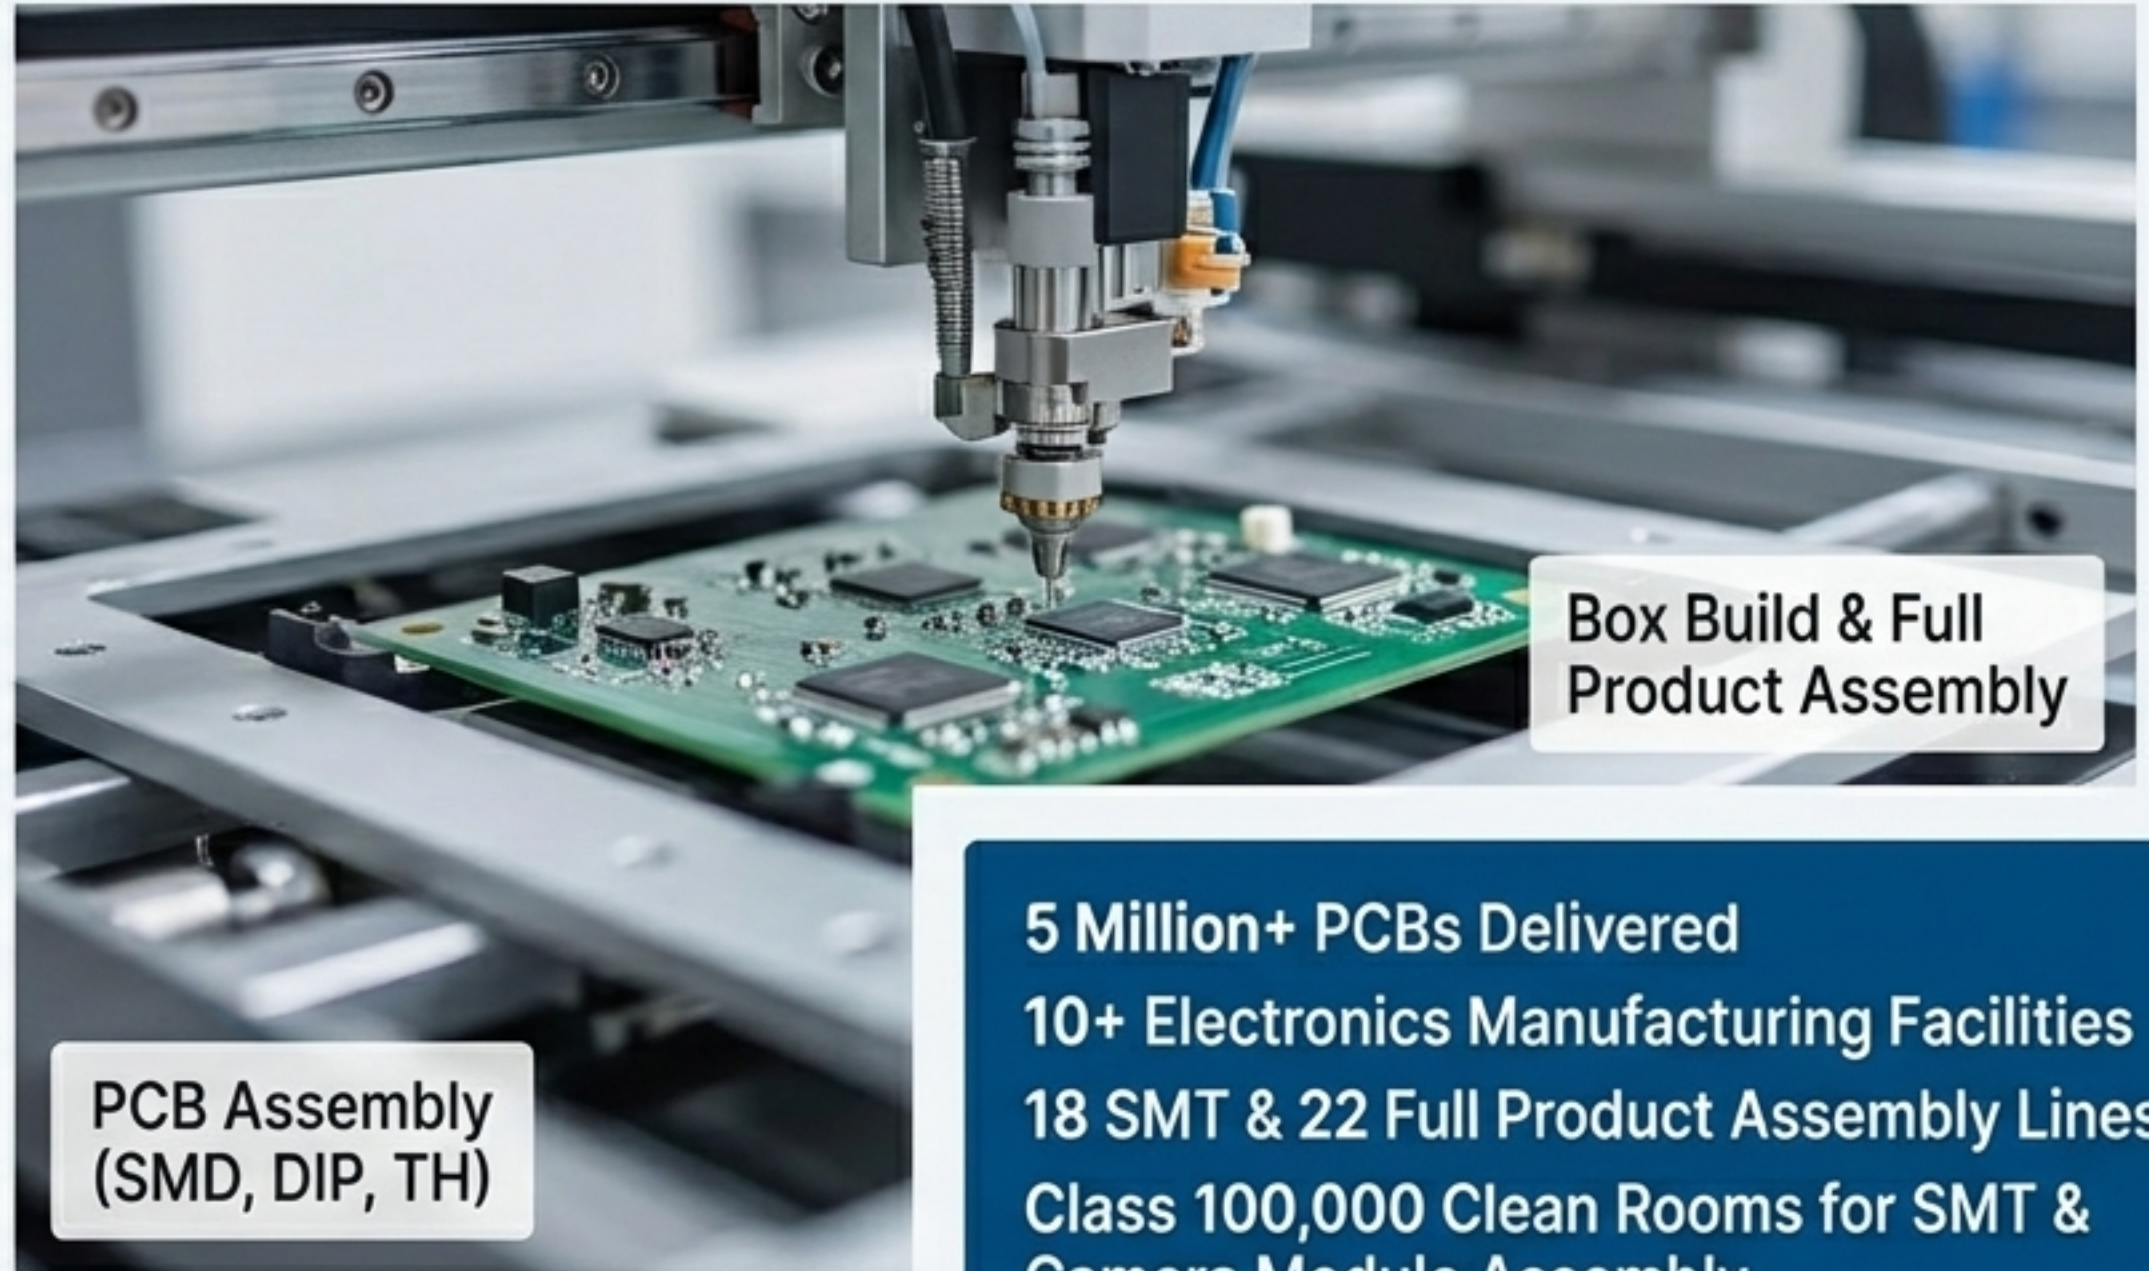

Our 5-Phase Product Development Life Cycle Ensures Predictable Outcomes.

World-Class, Multi-Disciplinary Engineering Under One Roof

A State-of-the-Art Manufacturing Engine to Build Your Product at Scale.

5 Million+ PCBs Delivered
10+ Electronics Manufacturing Facilities
18 SMT & 22 Full Product Assembly Lines
Class 100,000 Clean Rooms for SMT & Camera Module Assembly

Uncompromising Product Reliability Through Rigorous In-House Testing

EMI / EMC Testing

Semi-Anechoic
Chambers, EMI
Test Receivers

Environmental Testing

Thermal &
Humidity
Chambers, Salt
Spray,
Thermal Shock

IP Rating Validation

Water Spray
Chamber, Dust
Chamber

RF & Antenna Tuning

Spectrum
Analyzers,
Vector Network
Analyzers

Vehicle Simulation Testing

ACG Rig Test
Bench, Chassis
Dynamometer

A Resilient and Powerful Global Supply Chain is Your Unfair Advantage.

\$75M+

Annual Group
Purchasing Power

500+

Vetted Suppliers
Across 15+ Countries

50+

Authorized Distributor
Relationships (Arrow,
Avnet, Future, etc.)

10+

Direct OEM Associations
(Texas Instruments,
Microchip, Nordic, etc.)

Deep Domain Expertise Across High-Growth Industries

Automotive

ADAS, Infotainment
Systems, Vehicle-to-
Everything (V2X)

Healthcare

Remote Patient
Monitoring (RPM), IoT
Medical Devices,
Health Analytics

IoT & Industry 4.0

Spotlight on Automotive: Engineering the Future of Mobility

Expertise	Services	Use Case Example
ADAS/DMS Infotainment ECU Development Connected Vehicles Power Transmission & EV Motors	Automotive Grade PCB Design Firmware with CAN/LIN Protocols ISO 26262 Compliance Hardware-in-the-Loop (HIL) Testing	AI-powered Predictive Maintenance to detect faults in engine, brakes, and battery systems using Edge AI.

From Complex IoT to Life-Saving MedTech, We Deliver.

Smart Mailbox

An IoT device for drone package delivery.

Rapidise Role:

- End-to-end development including Embedded HW/FW, Mechanical, Cloud (AWS & Oracle), and Mobile Apps.

Electronic Pipette

An ergonomic MedTech device for labs.

Rapidise Role:

- System Architecture, Embedded Hardware & Firmware, Mechanical Design, and GUI Development.

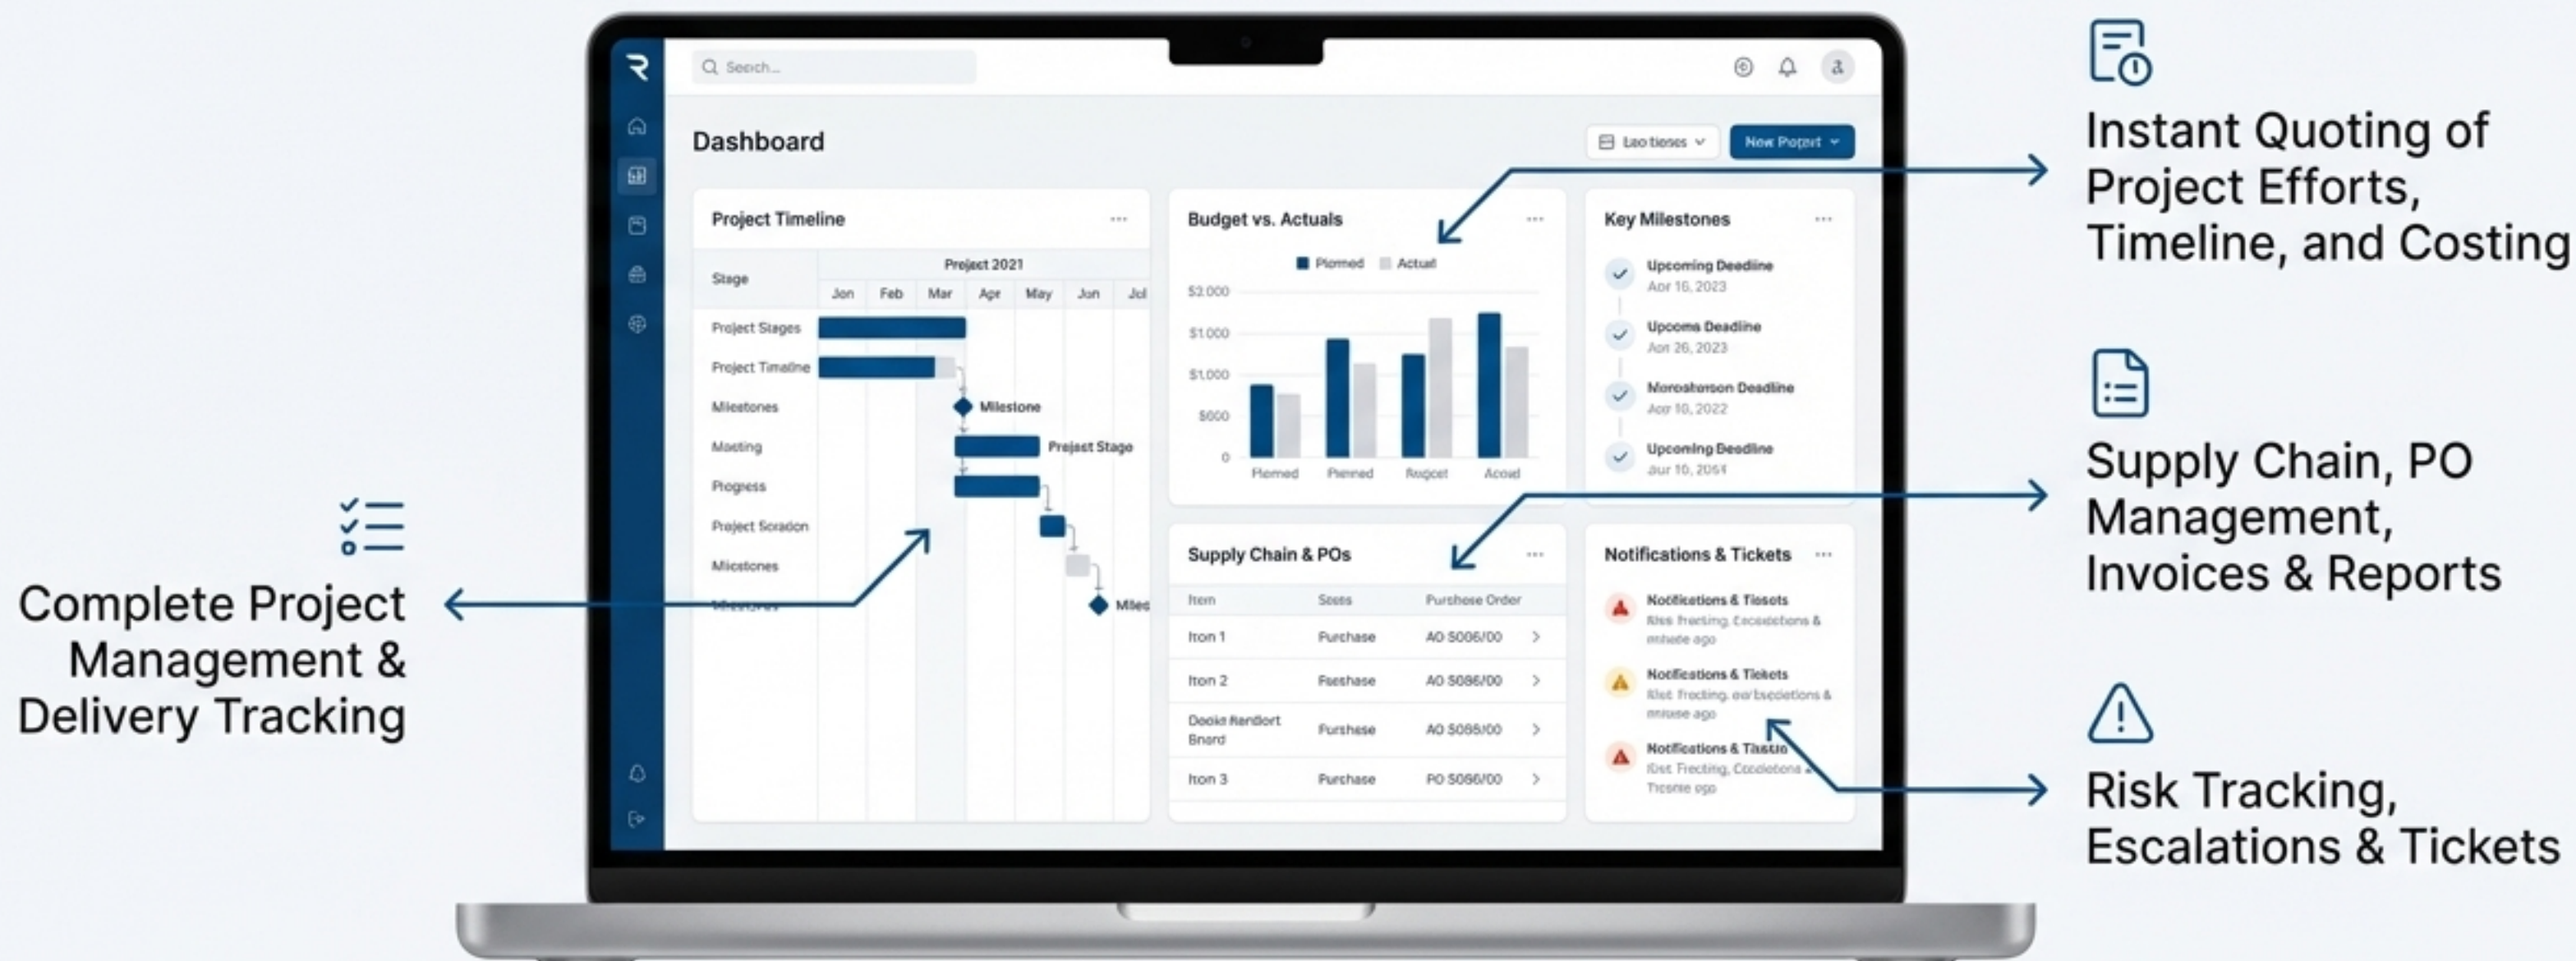

Plant Monitoring Dashboard

An Industrial IoT solution for heavy machinery.

Rapidise Role:

- Cloud Architecture (Azure), Custom Web Dashboard, Mobile App, and API Development.

Your Project Command Center: Full Transparency and Control on the Rapidise Platform.

Our Foundation of Trust.
